

Step 1: I am able to generate token as below in postman.

The screenshot shows a Postman interface for a POST request to `https://oauth.platform.intuit.com/oauth2/v1/tokens/bearer`. The request body is `x-www-form-urlencoded` and contains the following data:

Key	Value	Description
<input checked="" type="checkbox"/>	<code>client_id</code>	<code>{{qbo-clientid}}</code>
<input checked="" type="checkbox"/>	<code>grant_type</code>	<code>client_credentials</code>
<input checked="" type="checkbox"/>	<code>client_secret</code>	<code>{{qbo-client-secret}}</code>
<input checked="" type="checkbox"/>	<code>scope</code>	<code>{{qbo-scope}}</code>
<input type="checkbox"/>	<code>redirect_uri</code>	<code>https://develop.intuit.com</code>
<input type="checkbox"/>	<code>response_mode</code>	<code>code</code>

The response is a JSON object:
