About this User Guide

Why'd we create a User Guide?

This User Guide was made because customers wanted an organized, simple, and easy-to-find collection of information about ProFile's features. It's also designed to help new employees get started quickly. This means they don't need to get a lot of help.

For new ProFile customers

You will find a wealth of easy-to-review material that covers the basic functionality of ProFile. You can come back to the User Guide as the tax season progresses, or as the way you use ProFile changes. It has a lot of information that is covered in our [support articles](#), which are updated regularly.

For returning ProFile customers

You probably already know the basics (and even the advanced) functionalities within ProFile. The User Guide contains a ton of information in one convenient, easy-to-use document that you can review, print, and bookmark.

System Requirements for ProFile

- Internet connectivity is required for activation, licensing, automatic updates, and additional ProFile features (for example, EFILE)
- Network/workstation install UNC path isn't supported
- Operating system Windows 10™, Windows 11, Windows Server 2016, and 2019
- .NET 4.8 installation and registration are required

 **Note:** Apple products aren't supported.

ProFile contains very sensitive data. Intuit won't be responsible for security or other reliability issues for ProFile running on Windows 10 systems.

Microsoft is set to deprecate Windows 10 as of October 14, 2025. After this date, Windows will no longer provide free security updates or technical support will be available for Windows 10. This can impact the security and reliability of any programs running on your system. We strongly encourage you to [upgrade for free to Windows 11](#) to continue getting Microsoft Support.

If you choose not to upgrade to Windows 11 from Windows 10, we strongly recommend purchasing the [Extended Security Upgrade \(ESU\) program](#) to keep your device secure.

For the most up to date system requirements, check out our [system requirements](#).

Getting Started with ProFile

Downloading and Installing ProFile

An internet connection is required to download and install ProFile. You'll also need administrator rights for the computer on which you wish to install ProFile.

Download ProFile

1. Browse to the [ProFile download page](#).
2. Determine if you are a new customer, returning customer, if you require OnePay, or a reinstall of ProFile.
3. Follow the necessary instructions. Often, the requirement will include the download of the ProFile installation file (called **gpsetup.exe**).
4. Your web browser may ask you to confirm if the file download can continue. Select **Yes** or **OK** when prompted.

 **Note:** If asked to choose a place to store the installation file, we suggest your computer's Desktop or Downloads folder, or another easy-to-find folder.

The download may take several minutes.

Install ProFile

1. Locate the saved **gpsetup.exe** installation file.
2. Double-click the file to begin the installation.
3. Follow the dialogue boxes when prompted to install ProFile.

Activating ProFile

Note: An Internet connection is required to activate ProFile. Also, you must have administrator rights for the computer on which you wish to install ProFile.

Activating from the ProFile icon

1. Locate the **ProFile icon** on the computer desktop. It installs there during the download and activation process.
2. Double-click the ProFile icon.

The Activate New License prompt displays when ProFile opens. The product code field can remain empty. The license key information is provided to you on your purchase receipt.

3. Enter your License Key and select **Activate**.

The license key activates. ProFile displays a confirmation message. Once activated, you can close the confirmation window.

4. Select **Add another license** to add more licenses, if necessary. If you have purchased additional licenses for a module, enter the License Key only once on each additional computer.
5. Select **I'm Done** after all product codes have been entered. Activation may take a few minutes to complete.

ProFile displays a message requesting a check to determine if you are using the most current version of the software. You can skip or delay this check, or select **OK** to continue with the check.

✓ You have successfully activated ProFile.

Checking Your Version of ProFile

ProFile is constantly undergoing improvements and adding to its features to benefit customers. It's important for Preparers to have the latest version to ensure the full functionality of ProFile is available.

In addition, knowing where and how to check the version of ProFile is helpful in the case of a support call. ProFile's Care representatives will often ask which version of the software is in use when troubleshooting an issue.

Checking ProFile version:

1. Open ProFile.
2. Select the **About** option from the **Help** dropdown menu.

The **About** window displays.

3. Review the ProFile version number (for example, **2025.1.5**).

Updating ProFile to the Latest Version

During the tax season, ProFile updates with new CRA information, tax rates, forms, and more. It's important to keep ProFile up to date to ensure compliance with the latest CRA requirements. The recommendation is to check - at the very minimum - once per week.

Updating ProFile:

1. Open ProFile.
2. Select the **Check for Updates...** option from the **Online** dropdown menu.

ProFile connects to the Internet to see if there are any available updates. If there are, you are prompted to download and install the newest update.

3. If no updates are available, select **OK** to close the window.

Automatic Check for Updates

You can enable ProFile to automatically check for updates. To enable this feature,

1. Select **Options** from the menu , then select **Environment Options...**
2. Select the System tab.
3. In the **Automatic Check for Updates** section, tick the **Enable automatic check for updates** box

Background Updater

In the Automatic Check for Updates section, check the Enable check for updates box. This lets you download updates automatically in the background, without disrupting your work. You can locate the **Automatic Check for Updates** section, under **Enable automatic check for updates**.

Once the check box has been enabled, you will see a status box in your icon tray.

A new version of ProFile is available

Version 2022.2.0.577 is now available.

Here's what is included:

Introduction
Version 2022.2.0
Download the latest release of the ProFile Suite, version 2022.2.0.
Some forms for the 2022 taxation year are not released by CRA at this time. In-product forms include a '1' Note: We recommend that discounters in provinces that provide refundable tax credits do not use this re
T1/TP1 highlights include:

Learn more about the updates. [Read the release notes](#)

⚠ Don't forget to back up before you update

- If you're already backed up, press 'Next' to continue with the update
- If you don't normally make backups, we can help you back up files to a local or network drive during the update in the next steps (Click Next to continue)

Using ProFile 20

ProFile 20 is a bundle of 20 returns that provides a more cost-efficient alternative to Preparers than buying individual OnePay returns. It's best suited for Preparers who have 20 or fewer T1/TP1 returns to file.

ProFile 20 supports T1/TP1 returns for tax years 2015-2025

ProFile 20 customers are charged a return ONLY when they EFILE a return or print a return using the T1 Condensed setting.

Getting started

Visit our [ProFile 20 website](#) or call our sales team at **1-844-861-3600** to purchase ProFile 20.

Accessing ProFile 20

ProFile 20 customers receive an email containing their License Key.

1. Open ProFile.
2. Select the **Manage Licenses** option from the **Help** dropdown menu. The **License** wizard displays.
3. Select **Add New License**, the **ProFile License Activation** window displays.
4. Enter the **License Key** from the email and select **Activate**.

The ProFile license activates. You can now print and EFILE T1/TP1 returns using ProFile 20.

Am I charged a ProFile 20 return if I just prepare a return?

No. ProFile 20 customers can prepare as many T1/TP1 returns as they like without being charged.

Does ProFile 20 work with Flexible Licensing?

Yes.

How many ProFile 20 licenses can I buy at one time?

Only a single ProFile 20 license may be purchased at one time.

If more than 20 returns need to be filed or printed, Preparers can purchase another ProFile 20 license when all returns are used or opt for OnePay or purchase the unlimited version.

Will I get a refund for unused ProFile 20 returns?

No, there are no refunds provided for unused ProFile 20 returns.

Can I use the remaining returns on my ProFile 20 for the next year? For example, can I use the 20248 license for 2025 returns?

No. In this example, any remaining ProFile 20 returns would need to be used to EFILE or print prior year returns.

Will I be notified how many ProFile 20 returns I have remaining when submitting or printing a return?

An assessment window displays the remaining number of ProFile 20 returns when a return is used.

Will I be informed when all ProFile 20 returns have been used?

A notification window indicates when all ProFile 20 returns have been used:

Review our [support article](#) for additional details.

Managing OnePay in ProFile

Overview of ProFile OnePay

OnePay is a one-time license that allows a ProFile customer to file a single T1, T2, or T3 return. It's an alternative to purchasing a full ProFile license, which lets you do unlimited returns.

OnePay is best suited for:

- An existing ProFile customer whose license has expired, but still needs to file a return or returns
- A new ProFile customer with a limited number of returns to be filed
- A resident of Quebec at the end of the fiscal year, and only the Federal module has been purchased and not the Quebec TP1 or the Quebec T646*
- A ProFile customer with a business registered in Quebec*

! Note: In the event of the OnePay purchase is for Quebec, the Preparer is required to NetFile the TP1 separately from the Federal. They also require a NetFile QC Number and Access Code. For more information, visit Revenu Québec.

! Note: If the taxpayer resides in any other Province and has an RL-1, the TP1 return isn't necessary. The RL-1 information may be entered in the T4 form.

Purchasing ProFile OnePay

OnePay is purchased only from within ProFile. An internet connection is required to complete the purchase via our secure web page.

! Note: if purchasing a OnePay for a recurring client, carry forward the return(s) before purchase. If you purchase the OnePay prior to carrying forward the file, it may consume the OnePay license.

1. Open the necessary return in the appropriate module (for example, **T1**).
2. Select the **Star** icon  from the top toolbar menu in ProFile or select the **Purchase OnePay...** option from the **File** menu.

The product selection wizard displays.

3. Select **Get Started** under the **OnePay** option.

The license purchase menu displays.

4. Select **Add to cart** to purchase a license based on the required module(s).
5. Select **Proceed to checkout** when prompted to purchase.
6. Enter the necessary company and billing information.
7. Select **Continue**, the **Payment Information** window displays.
8. Enter the necessary payment information and select **Continue**.

The **Review Your Order** window displays.

9. Review the payment and purchase information. If correct, select **Place Order**.

The confirmation window displays the OnePay order and cost.

10. Select the **close this window** link. The link is highlighted in the screenshot.

The OnePay payment wizard closes.

11. The Preparer returns to ProFile and to the return being filed.

Troubleshooting ProFile OnePay

I received an error message at the end of a OnePay purchase transaction.

When purchasing OnePay through ProFile's OnePay Purchase wizard, the following error may appear:

"Your online purchase transaction was not completed. Please go back and review your selections".

This isn't a ProFile error, but could be resulting from one of the following situations:

- High security settings on the computer (see solutions below)
- A network disruption (check your network is functioning)
- The transaction timed-out (retry the transaction to completion)

The following are solutions that may resolve the high security setting issue:

- Check ProFile version is the latest
- Check Windows Update for any recent OS updates
- Set firewall/antivirus exception for ProFile
- Set SSL/TSL security
- Allow pop-ups
- Clear your cache and browsing history
- Check for Proxy settings
- Check .NET version is the latest

Can I purchase more than a single OnePay?

When purchasing One-Pay, only one unit can be purchased at a time. If you enter more than one number in the Quantity field, you will be charged for that number, but you will only get one license.

I'm being prompted to purchase OnePay.

If a ProFile customer attempts to populate a form for any module (for example, T1, T2, or T3) without an existing valid ProFile license, the OnePay purchase wizard displays.

Can I use Auto-fill my Return (AFR) with OnePay?

Yes. Prior to using AFR with OnePay the Preparer requires:

- An EFILE account
- A representative ID
- A filed & active T1 Authorize a representative request with CRA

[Review the CRA article](#) to learn more about authorizing or canceling a representative.

I downloaded a trial version of ProFile, but when I try to evaluate the software, the OnePay Wizard appears, asking me to purchase a return.

When installing a ProFile Trial version, make sure you insert the new License Key in the License window.

I'm seeing a trial watermark written through all the forms when I print the return using a OnePay license.

This happens because the Trial license and the OnePay are both activated in ProFile at the same time and the Trial license is overriding the OnePay.

In ProFile:

1. Browse to the **Help -> License -> Details** option.
2. Select the **Trial License** option.
3. Select the **Delete Selected License** option.
4. Close the **Licensing** window
5. Open the file to print by browsing to the **File -> Open** option.
6. Print normally.

 **Note:** If you have removed a Trial License and still get a trial watermark, call support for help.

QuickStart Menu in ProFile

The QuickStart menu makes getting started with ProFile easier and faster.

QuickStart menu tabs

Each available module occupies a tab along the top of the QuickStart menu.

Each module tab features a small black arrow that expands to display previous tax years.

Links from the QuickStart window let Preparers easily undertake the following:

- Create a new file, or return
- Open an existing file that was previously saved
- Carry forward a file from a previous taxation year to the current taxation year
- Open a file that was recently worked on
- Access in-product Help, user forums, and more support resources

Turn off the QuickStart menu:

The QuickStart menu can be turned off if you prefer not to use its functionality.

1. Identify the checkbox in the bottom corner of the QuickStart menu.
2. Toggle off the checkbox. The QuickStart menu will no longer appear when ProFile starts.
3. To re-establish the QuickStart menu later, select the **Help** and then **QuickStart**.

Using a Trial License in ProFile

A trial license gives Preparers the opportunity to try the functionality of ProFile without any cost.

What's included with a trial license?

A trial includes access to all the modules and features ProFile has to offer, except for filing completed tax returns, print features, access to Intuit Sign, and access to the CRAs AFR service.. These features include:

- T1/TP1 for Individual tax returns
- T2 for Corporate tax returns
- T3/TP-646 for Trust returns
- FX/FXQ for additional forms (T4/T5, etc.)

Getting a trial license

1. Visit the [free trial section of the ProFile website](#).
2. Sign in to your One Intuit Account, or create an account if you don't have one.
3. Complete the **information fields** throughout the wizard.
4. Review the information and **Place Order**.

The temporary license key is provided via email.

5. Download ProFile, enter your license key, and begin your free trial.

The screenshot shows the 'Let's review your info' page in the Intuit ProFile Tax interface. The page is divided into two main sections: 'Company Address' and 'Your Cart'.

Company Address: This section contains a form with a blurred address and an 'Edit' link.

Your Cart: This section displays the items in the cart and their prices.

Your Cart	
ProFile Tax Suite (Includes Quebec), Tax Year 2025 - TRIAL	CAD \$0.00
Subtotal	CAD \$0.00
Total	CAD \$0.00

At the bottom right of the cart section, there is a blue button labeled 'Place Order'.

Set Up & Settings

Using the Start Screen in ProFile

The ProFile start screen contains most of the options and elements required to complete forms and slips. When starting ProFile for the first time, many of the action icons will be “greyed out” or inactive. Once forms and slips are created, many will become active for use.

The top toolbar menu

ProFile’s top toolbar menu has the most options to begin completing and filing client returns. Below are some of those features:

The **File** menu includes many of the functional features for ProFile, including Open a return, Carry Forward, Import Data, and Print.

The **Goto** menu activates the ProFile database options of Form Explorer and Client Explorer.

The **Form** menu allows users to open, print, and close forms in ProFile, as well as clear populated forms.

The **Options** menu allows Preparers to customize the ProFile environment, module, database, templates, pricing, and other features.

The **EFILE** menu displays current and archived EFILE returns, as well as the ability to set EFILE options.

The **Online** menu connects users to online support materials, the Live Community, and software updates.

The **Training** menu lists in-product tutorials for individual tax years and modules.

The **Window** menu gives ProFile users the ability to reorient the view of ProFile.

The **Help** menu links users to support materials, flexible licensing options, and the in-product Help feature.

Setting Preparer Information in ProFile

Preparer information can be easily entered in ProFile. This lets the Preparer section of ProFile Info forms to automatically populate whenever a new form is created.

1. Select **Environment...** from the **Options** dropdown menu.

The **Environment Options** window displays.

2. Select the **Preparer** tab. A list of information fields displays.
3. Complete the necessary fields.
4. Select **OK**.

✓ The Preparer information saves.

Automatically updating Preparer information changes

Preparers can set an automatic update for the Preparer section of returns when changes are retroactively made to the Preparer information. For example, if the name of the Preparer's firm changes, the returns with the firm's name automatically update to the new name.

1. Select **Module...** from the **Options** dropdown menu.
2. In the **General** tab, scroll down to the **Options** section.
3. Activate the **Update Preparer information on Info form** checkbox.
4. Select **OK**. The settings are saved.

Setting up for EFILE in ProFile

Prior to using the EFILE function for a return, it's necessary to use the set-up wizard in ProFile.

Setting up for EFILE:

1. Select the **Set EFILE Password** option from the **EFILE** dropdown menu.

The **EFILE Wizard** displays.

2. Select **Next** to continue.
3. During the Set EFILE Password process, users will require the following:
 - EFILE On-Line Number (from CRA)
 - EFILE On-Line Password (from CRA)
 - NetFile Quebec Number (if applicable, from MRQ)
 - NetFile Quebec Password (if applicable, from MRQ)
 - EFILE number (from CRA)
4. For federal filing, you will enter your EFILE Number as well as the Password provided to you by CRA. The new requirement from CRA is to re-enter the password to ensure it's correct and prevent EFILE failures. Select **Next**.
5. If you are registered for NetFile from MRQ, enter your EFILE Number and Access code enter the information on this screen. Select **Next**. Then enter your CRA EFILE Number again, and select **Next**.
6. Select **Finish** when all applicable information is entered.

! Note: If you are using an Options Package, save the options package **after** entering in the new EFILE information.

Creating a New File in ProFile

Creating a new file or return in ProFile is quick and convenient.

Note: Only tax modules that have been purchased can be created in ProFile. However, previous tax years are made available for the purchased tax module.

Creating a new file in the current tax year

1. Open ProFile.
2. Select the **New** option from the **File** dropdown menu.

A list of available modules displays in the menu.

3. Select the desired module. A new return opens in ProFile.

Alternatively, you can use the new  icon. More detailed module information can be chosen from the dropdown arrow beside it.

Creating Older Files

There are three options under the **New** option in the **File** dropdown menu for older modules:

- Older T1/TP1 Modules
 - Older T3 Modules
 - Older FX Modules
1. Select the applicable option for creating an older module (for example, T1/TP1). A list of previous tax years supported by ProFile displays.
 2. Select the desired module. A new return opens in ProFile.

1. Use the filter options to identify which files to carry forward. For example, if you only want to carry forward T1 files from the year 2018, select the **T1** module tab, then the **2018**-year designation.
2. Select **Apply Filters**. The files matching the selected filter options display.
3. Select the files to carry forward. To select all files, right-click in the window and choose **Select All** from the pop-up menu. All files are highlighted.
4. Right-click on the selected file(s) and select the **Carry Forward Files** option from the menu.

 The file(s) are carried forward.

Using Additional Profile Features

Fast Reopening of Files

ProFile lets Preparers quickly reopen returns that they have recently worked on.

Fast reopen of returns:

1. Select the **arrow next to the file folder icon** in the top ProFile toolbar.

A list of recently opened returns displays.

2. Select the return to continue working on. The return opens.

Note: Preparers can also review a list of recently opened returns under the **File** menu in the top ProFile toolbar.

Carry Forward Files in ProFile

Carry forward is a ProFile service that lets an existing client information from a previous year's files be moved forward into a new file. This saves time and effort for Preparers. Preparers can also carry forward a previous year's ProFile file, or a file prepared using a competitor's product, as well as multiple files at one time.

Carry forward files in ProFile:

1. Select the **Carry Forward...** option from the **File** dropdown menu.
2. Select the module (for example, T1) and tax year of the file to carry forward from the dropdown list.
3. Select the specific file to carry forward.
4. Select **Carry forward**

✓ The selected file carries forward.

Batch Carry Forward Files

ProFile has a feature called Carry Forward Files. This feature lets you bring back the results from the past year into the current module.

1. Open **Client Explorer** in ProFile.

Client Explorer displays a list of tax return files.

2. Select **Filter**. The filter menu displays at the bottom of the Client Explorer window.
3. Select files to carry forward (for example, **all T1 files**) and the previous year (for example, **2024**) from the checkbox menu.
4. Select **Apply Filters**. The filter will display all files meeting the selected criteria.
5. Select the **Select All** link.
6. Select the **Carry Forward Files** option.

✓ The files carry forward.

Carry Forward Competitor Returns in ProFile

Tax Cycle

What years are supported for conversion?

The T1 module supports 2021-2024 files. The T2 module supports T2 2016-2024 and later files. Version 14.2.57271.09 of TaxCycle is required.

Is there a limit on how many files can be converted?

There's no limit on how many files can be converted.

Who can convert TaxCycle client files to ProFile?

File conversion is available to current year customers only.

How long will it take to convert my client files to ProFile?

Usually client files are migrated within an hour, depending on the number of client files uploaded. Customers receive an email from ProFile indicating when the conversion is complete.

What data gets converted during the conversion process?

The conversion process doesn't produce a complete or accurate prior-year tax return for side-by-side comparison. ProFile converts pertinent data to next year's tax return. Conversion isn't a 1:1 transfer of data to reproduce the same tax return for the same year.

The converted files are a starting point for next year's tax program. The data in the converted file shouldn't be changed in the previous year's tax program.

How's this different from other carry forwards?

TaxCycle carry forwards work differently from other carry-forwards. A technology is used that allows for faster field mappings and an improvement in comparison between TaxCycle and ProFile returns. The result is a faster and more-accurate carry-forward experience.

How long are my client files saved on Intuit's network?

Client data is used for conversion purposes only. After the data is converted, a copy is maintained for conversion backup purposes and is destroyed after a 30-day period.

Help ensure you download your files within 30 days of conversion, or you will need to repeat the conversion process. See section "Download converted client data" below for the steps in the download process.

Why were some of my files not converted?

There can be several reasons why a TaxCycle client file didn't convert:

- The file may not have been in the correct folder
- The file may have been locked, or password-protected
- The file may be corrupted
- The file may be missing critical information

The affected files can be corrected and resubmitted.

What fields are supported and unsupported?

Supported fields include:

- All taxpayer information, including taxpayer, spouse, dependents, corporation, etc.
- All important carryover amounts that can be obtained
- 5-year, comparative summary, installments schedule
- Capital cost allowance
- Loss carryover amounts

Unsupported fields include:

- Quebec TP1 and CO17 tax information
- Amounts that aren't relevant to next-year tax preparation
- Some provincial credit carry forward amounts

Copying TaxCycle client data:

1. Create a new folder under your computer's C: Drive titled **conversion data**. This folder may already exist on your C: Drive if you have already updated ProFile to version 2025.2.0 or later.
2. Browse to the folder containing the TaxCycle client files to carry forward. You can find this location under **Options > Files and Folders** in your TaxCycle software.
3. Remove any locks or password protection from the files to carry forward.
4. Copy and paste the files to carry forward to the new C:\conversiondata folder you created.

Submit client data for carry forward:

1. Select the **File** menu in ProFile.

2. Select the **Submit Client Data for Carry Forward...** option under the **TaxCycle Carry Forward...** menu.

The **Sign In** window displays.

3. Sign in to your One Intuit account.

If you don't yet have a One Intuit account, select **Create an account**.

! Note: You may be prompted to sign in to your ProFile account a second time during the conversion process. This is normal behaviour.

✓ A secure connection is established.

The **Intuit Competitor Carryforward Wizard** displays.

4. Select **I am ready** to continue. The module selection window displays.
5. Select the module you want from the dropdown menu. This module is for the files you want to change for the carry forward process. For example, TaxCycle T1.

! Note: Each module's files must be converted separately. It isn't possible to convert T1 and T2 files at one time.

6. The carry forward wizard reads and displays files matching the selected module from the **C:/conversiondata** folder.
7. Select all files to undergo conversion prior to carry forward.

! Note: only files in the **C:/conversiondata** folder display for selection. If you don't see a file that should be converted, help ensure it's been copied to the folder.

8. Select **Next**. The selected files begin the conversion. Most jobs will complete within minutes, so you can minimize this window and work in ProFile as the upload/conversion takes place.

ProFile emails a notice that conversion has begun.

9. You can select **Cancel Job** at any time to cancel the conversion. Conversion may take several minutes depending on file size and the number of files being converted.

A progress bar displays conversion progress.

A **Conversion complete** message displays when the files are successfully converted.

ProFile converts the TaxCycle files to a ProFile-compatible format.

ProFile emails you a notice that the conversion is complete.

10. Select **Close**. The **Conversion summary window** displays.
11. Select **Open Destination Folder** to review the converted files in the TaxCycle folder.
The location will be **C:\Users\[local user]\Documents\My ProFile Data\TaxCycle\[module]**.
12. Select **Finish**.

Note: You can't change the file path for the input (the conversion data folder) or the output (My ProFile DataTaxCycle) folders. If you need to save files on a network or other place, you must move them to the place you want them after the conversion.

You may now open the client files in ProFile for further work or electronic filing.

Review our [support article](#) for information on troubleshooting errors and downloading converted client data.

Other Competitors

Carry forward other supplier's files

ProFile supports the carry forward of files for the following suppliers: Taxprep, TaxCycle, Cantax, and DTMax.

Review [our full support article](#) on carrying forward other supplier's returns.

Managing Software Integration in ProFile

QuickBooks Desktop Integration

It's easy and convenient to integrate QuickBooks Desktop with ProFile. Select the applicable activity below.

Integrate ProFile and QuickBooks Desktop

The integration process lets ProFile to display as an integrated application in QuickBooks.

Review our [support article](#) for more information.

Importing data from QuickBooks Desktop to ProFile (T2)

The import data process imports amounts from QuickBooks Desktop into ProFile.

Review our [support article](#) for more information.

Using ProFile Notification Services

The ProFile notification service provides timely and important information directly to customers. This may include CRA announcements, ProFile releases and patches, or critical issues.

Start-Up Notifications

Start-Up notifications display when ProFile starts. They are often urgent messages that affect most or all Preparers. They may include reminders of recent software updates, CRA changes, or notices of service interruptions.

ProFile in-application Notification Centre

The in-application Notification Centre displays within the ProFile application. It lists recent notifications in the sequence they arrive. Each can be deleted if the information is no longer relevant to the Preparer. Preparers can also turn the in-application Notification Centre to Off status to no longer see notifications in the application.

Information Call-out

The Information Call-out highlights general, non-emergency information for ProFile customers. The call-out displays temporarily, then removes itself from view.

Electronic Signatures

Using Intuit Sign, Adobe Sign and DocuSign

Electronic signatures (or "eSignatures") are a new way to ask clients for signatures and other inputs on forms and documents in ProFile. ProFile users can track which requests have been completed and which are still outstanding in one convenient dashboard after requests have been sent to your customers.

Intuit has three products that let you request signatures and other inputs directly from ProFile. You don't have to track individual emails or files. These products are Intuit Sign, Adobe Sign, and DocuSign. Intuit Sign is Intuit's own electronic signature solution. Adobe Sign and DocuSign are both products that are sold by other companies. Separate fees may apply, and a paid ProFile license is required for all 3 solutions. Find out more about [setting up and using Adobe Sign and DocuSign](#).

Intuit Sign requires a separate license that can be purchased along with your ProFile license. Learn more about [purchasing and setting up Intuit Sign](#).

Using the Client Explorer Database in ProFile

Setting Client Explorer as the ProFile Database

ProFile users can set and use Client Explorer as the database when preparing client returns. The database allows you to use filters and queries to narrow down what you see amongst your clients, as well as perform certain batch actions, such as carry forward, EFILE, or print.

Setting Client Explorer as database:

1. Open ProFile.
2. Select the **Database** option from the **Options** dropdown menu.

The **Database/Client Explorer Options** window displays.

3. Select the **Use Client Explorer** option, the Client Explorer menu displays.
4. Select the **Personal Server** or **Shared Server option**.
5. Select the folder path if a shared server is being used.
6. Select **Setup Wizard** to create a shared server.
7. Select **Advanced** to explore additional options, including the handling of clients with no SIN.
8. Select **OK** when completed.

✓ The Client Explorer is set as the database option.

Using Filters in Client Explorer

By default, the Client Explorer displays all files regardless of the type of return, taxation year, or status. By default, the Client Explorer shows all files, no matter what type of return, tax year, or status. Filters let only those files that meet the requirements set by the Preparers show up. These include files that have already been filed or files that are still missing.

Viewing Filter options:

1. Select the **Client Explorer** option from the **Goto** dropdown menu.

A list of all available returns for clients displays.

2. Select **Filter**.

The filter window displays at the bottom of the ProFile program. The filter pane contains all filter options for clients and their returns.

Options for filtering display in individual tabs and include:

- Available tax years
- Modules (for example, T1, T2, etc.)
- Client Status
- EFILE status
- SEND status
- EVENT

Using Filters in Client Explorer: T1 EFILE Filtering Example:

Example: Filter for only T1 returns that are completed and ready to EFILE.

1. Select the **Client Explorer** option from the **Goto** dropdown menu.
2. Select **Filter**. The filter window displays at the bottom of the window.

Selecting forms:

1. Select the checkbox on the **T1** tab and clear the other module tabs by unchecking them. This displays only T1 forms.
2. Select the checkbox for the current year (for example, **2025**) on the **T1** tab and clear the checkboxes for all other years by unchecking them. This displays only the 2025 tax year.
3. Select the checkbox for **Carry Forward** in the **Client Status** column and clear the other statuses by unchecking them. This displays only those returns in the carry forward state.
4. Select the checkbox for **Eligible** in the **T1 EFILE Status** column and clear the other statuses by unchecking them. This displays only those returns in the "eligible" state.

 **Tip:** To quickly select/de-select items, right-click on the section (example: Years) and select either **Select All** or **Clear All**.

Applying filters:

1. Select **Apply Filters**.
2. Select the **All** tab in the Client view.

 The current year T1 files that are eligible for EFILE display.

Using Queries in Client Explorer

Note: A query applies only to returns of a single type (for example, 2025 T1 returns). The Client Explorer's search function lets Preparers create a list of files with specific values for printing or to include on a report. Queries can also select data to export or to select files that require mailing labels.

The query function filters the client list to compare fields and display the matching client files. A query can be applied for any field in the client file, including client city, debt level, return status, or age.

Query example:

A Preparer wants to choose all clients who were born before January 1, 1956, but after December 31, 1956. These clients are the ones who turned 69 in 2002.

Running a query:

1. Set **Client Explorer** as the database option in ProFile.
2. Open **Client Explorer** in ProFile. A list of clients displays.
3. Select **Filter**, a list of options displays.
4. Select the module to be queried (for example, **T1**) and tax year to be queried (for example, **2024**).
5. Select **Advanced**, the **Advanced Filters** window displays.
6. Select **New**. The **Advanced Filters** window expands to display **Add** and three Conditions for queries.
7. Select **Add**. The **Add Condition** window will display.

Note: If you need information from your returns that isn't found in the default Field Name options, you can pull information from any line of a return to query for deeper insights and reporting. For more information, please refer to our [support article](#).

Setting conditions for queries

In this example, we'll be querying client invoices for amounts no greater than \$10,000.

1. Select the dropdown menu in the **Condition** field of the **Add Condition** window. A list of conditions will display.
2. Complete the **Field Name**, **Condition**, and **Compare to** fields.
3. Repeat Steps 1 and 2 if you require additional conditions.
4. When the query is completed, Select **Ok**.
5. A window appears asking if you'd like to save the query. If you will use it again, select **Yes**.
6. You are then prompted to name the query. Select **OK**. In the Client Explorer, select **Apply Filters**.

✓ The query runs and displays results.

Note: If your query uses the date field, make sure your computer's date and time are set to YYYY/MM/DD. This matches the format CRA uses and helps you avoid error messages.

For more detailed instructions on queries, review our [support article](#).

Printing Reports in Client Explorer

The Client Explorer's report function allows Preparers to print data from ProFile returns.

! Note: A query applies only to returns of a single type (for example, 2025 T1 returns).

Setting Client Explorer Report Parameters and Data:

1. Open **Client Explorer** in ProFile.
2. Filter returns by the necessary parameters (for example, tax year, status, etc.).
3. Select the **Select All** option under the **Database** dropdown menu.
4. Select the **Print Report** option under the **Database** dropdown menu. The **Create Report** window displays.
5. Select **Options**, the **Report Options** window displays.
6. Select the **Fields** tab.

The options display for creating a report, including column, rows, titles, and organization of report content.

7. Select the data to be listed under each report heading.

! Tip: You can also insert field codes from any line of a return by copying them into your report, if they already exist in your query. Delete the {} on either end of the field's code so the text turns black for the field code to be applied.

Running a Client Explorer report:

1. Select **Save** in the **Report Options** window. The report's parameters are saved.
2. Select **OK**. The **Report Options** window closes.

3. Select the **Print** option from the **Create Report** window.

The report compiles, and is sent to the designated printer.

Using Mailing Labels in Client Explorer

ProFile's Client Explorer provides Preparers with a simple and convenient method for printing mailing labels.

Choosing a mailing label:

1. Select the **Setup Mailing Labels...** option from the **File** dropdown menu.

The **Label Selection** window displays.

2. Select the return type (for example, **T1**) and tax year (for example, **2025**) from the tab menu.
3. Select the **Label Type** from the dropdown menu.

Creating a new mailing label:

1. Select **New Label**. The **Label Details** fields activate and populate.
2. Enter the specific measurements for the label in the **Label Details** fields.
3. Save the name of the new label in the **Label Details** field (for example, **T1 2025 Label**).
4. Select **OK**. The label saves and the window closes.

Printing mailing labels:

1. Open the **Client Explorer** database in ProFile.
2. Select the client for which the label will apply.
3. Select the **Print Mailing Labels** option under the **Database** dropdown menu. The **Print Labels** window displays.
4. Select the number of labels to print under the **Copies** field.
5. Select the checkbox for **Print only one label for coupled return?** If required.
6. Select **OK**. The label(s) print.

! Tip: You can batch-print clients by filtering for the module and tax year. After applying filters, select all clients, and continue with step 3 in the above instructions.

Batch EFILE in Client Explorer

ProFile users can build and EFILE files to CRA for multiple clients and returns at once. Doing so creates a “batch”, a set of individual and client files ready for EFILE, which ProFile sends to CRA or RQ all at once.

Note: Batch EFILE is only available for T1, TP1, and FX modules.

Batch and transmit files:

1. Open **Client Explorer** in ProFile.
2. Select the type of EFILE operation to perform from the dropdown menu. ProFile filters the list of files to reflect only those with the selected status (for example, **T1 - EFILE Eligible**).

The list of eligible files displays.

3. Select the files to include in the batch transition.
4. Right-click on the selected files and select **the Build EFILE File...** option from the menu. Alternatively select **Build EFILE...** from the left **Action** menu.

The build window displays.

5. If necessary, specify the type of EFILE file to create, or the agency, data type, or slip type.
6. Select **OK**.

The EFILE files build. The build status of each return displays as **Successful** or **Failed**.

7. Select the red **X** to display the issue with the **Failed** return. Select **Transmit now**. The files are transmitted to the CRA. You can also select the **Transmit later** option.

Note: CRA stipulates a two-second pause between the EFILE of each file. This may result in a slower-than-expected process to EFILE for customers with many files in a batch.

Note: A single file with client names and confirmation codes is generated and may be difficult to find specific clients if you have multiple filing batches. Ensure you come up with a process to identify which clients are in each batch.

Batch Printing Forms in Client Explorer

It's easy to print pre-configured print sets for multiple clients at the same time.

Printing forms for a group of clients:

1. Open **Client Explorer**.
2. Select the designation for clients in the dropdown list (for example, **T1 - EFILE Eligible**). The clients matching the designation displays.
3. Select the clients to batch print.
4. Select the **Print files...** option from the **Actions** menu.

ProFile automatically selects the forms to print for each file based on the print job and print setting options configured in the **Form selection** window. For example, ProFile detects that each client selected will receive an "overdue invoice" letter.

✓ The files print.

Printing the same forms from each file:

You can print the same form for multiple clients at once. For example, a ProFile user may want to print a form for each client so that it can be mailed for the client's signature.

! Note: When printing forms from multiple clients at the same time, you can print only forms from files of the same module and year.

Printing forms:

1. Select the designation for clients in the dropdown list (for example, **T1 - EFILE Eligible**). The clients matching the designation displays. Alternatively, use the **Filter** option to narrow down the scope of clients you'd like displayed.
2. Right-click in the client list and choose the **Select All** option from the menu.

All forms are selected.

3. Select the **Print Forms in File...** option from the **Database** dropdown menu.

The **Print Selected Forms** window displays.

4. Enter the name of the form to print (for example, **T2038**).

 **Note:** To print several forms, enter them all with a colon as a divider between each form (for example, **T2038:T2036**).

5. Select **OK**. The forms print.

Using Templates in ProFile

Templates allow Preparers to save time and effort by creating commonly used communications that can be sent to one or more clients.

Selecting templates:

1. Select the **Templates** option from the **Options** dropdown menu.

The **Template Editor** window displays.

Using templates

The template list includes the most common communications that Preparers need. These include engagement letters, client invoices, and payment emails.

Both French and English templates are provided.

1. Double-click any template. The template opens in the editor pane.
2. Edit the template required and save for future use or additional editing and customization.

! Tip: Press **F1** on any field in the Template Editor to learn more about its function.

For more info, check out our article on [using file templates in ProFile](#).

Setting Pricing in ProFile

ProFile pricing feature provides a convenient method for Preparers to set costs and bill clients for services.

Getting started with pricing:

1. Select the **Pricing...** option from the **Options** dropdown menu.

The **Pricing Schedule** window displays.

Pricing options:

1. Select the module for which to set pricing options for (for example, T1). The current and previous tax year pricing displays.
2. Enter information for the GST registration number, invoice number, and GST/HST/PST rate.
3. Select the invoice type: **Detailed**, or **Brief**.
4. Select how the client will be invoiced: by **Schedule** or **Hour**.
5. Insert **costs for services** (for example, basic charge, capital gains, etc.)
6. Select **OK** to save the pricing information.

Tip: At the bottom of the list of forms, there's a line to enter your **Hourly rate**. This rate can be customized for different users if you use Options Packages.

Carry forward pricing:

ProFile lets Preparers carry forward pricing from previous tax years to the current tax year.

1. Select the previous tax year (for example, **2024 T1/TP1**). Review the pricing for services.
2. If the same pricing is to apply to the current tax year, select **Carry Forward**.
3. Select **OK** when asked to carry forward prices to the current tax year.

✓ The previous tax year pricing displays in the current tax year. It can be changed at any time.

Using Form Explorer in ProFile

The Form Explorer feature allows Preparers to locate individual forms, lines, and details within a client's return. In addition, Preparers can print forms from the Form Explorer and determine when it was last updated.

Starting the Form Explorer

1. Open ProFile.
2. Open a return (for example, a T1).
3. Select the **Form Explorer** option from the **Goto** dropdown menu.

The **Form Explorer** opens. The client's name displays in the top-left corner.

Using the Form Explorer

1. Select a view option from the top-right menu options. View options include:
 - **List** - displays all forms in the return
 - **Detail** - displays details and/or status about all forms in the return
 - **Key** - searches the return for keywords (for example, **RRSP**)
 - **Line** - displays each line in every form in the return.
2. Double-click any form listed in the **Forms Explorer**. The form opens in ProFile. Select **Print** to print any form from the Form Explorer.

Tip: Hover over each form to see a full title.

Using Options in ProFile

Setting Environment Options in ProFile

ProFile users can set options for their ProFile working environment. This includes PDF settings, form settings, reminders, security, and more. Select the **Environment...** option from the **Options** dropdown menu in ProFile.

The following list includes the most-commonly used options:

Edit tab

The Edit tab includes options for common tasks, such as allowing predictive typing, date stamping, SIN validation, and capitalization.

Display tab

The Display tab includes options for the display of ProFile, including font scaling, tab icons, and page breaks.

File tab

The File tab includes options for setting file directories, managing recently used files, and auto-saving files.

Preparer tab

The Preparer tab allows Preparers to insert their personal and firm information, including RepID, Group ID, and initials.

Discounter tab

The Discounter tab allows a discounter to insert their personal and firm information, including Discounter Registration Number.

Trustee tab

The Trustee tab allows trustees to insert their personal and firm information.

Audit tab

The Audit tab allows Preparers to set audit or edit error styles. This helps establish standards to prevent a return from being prematurely filed.

System tab

The System tab includes options for setting shared folders, checking for software updates, and using online features.

PDF tab

The PDF tab allows Preparers specify PDF characteristics for printed returns, PDF archive directories, and PDF security.

Using File Pathing in ProFile

About file pathing

ProFile users can set where their client's returns are stored. The file path can be changed or locked to prevent deletion or copying.

Managing file paths:

1. Select the **Environment...** option from the **Options** dropdown menu.
2. Select the **File** tab in the **Environment Options** window.

Files paths display under the **File Directories** section of the window.

Files in the file path display in the corresponding directory in Explorer.

3. Select the **Lock** checkbox to lock the file path to prevent any changes. The lock feature will default back to this file directory but can be changed even when locked.

Changing file path:

1. Select the file directory to change.
2. Select **Show path** .

The **Browse** window explorer displays.

3. Select a new location from the **Browse** window. Select **OK**.

Using Module Options in ProFile

Module options overview

ProFile customers can edit options for each tax module (for example, T1, T2, etc.) for which they are preparing returns.

Select the **Module...** option from the **Options** dropdown menu.

Setting module options

Each module tab includes an active down arrow. Select the arrow to display the available tax years for the module display.

Module Option Tabs

General tab

The General tab includes options for carry-forward, individual forms, access, and more.

Data Locking tab

The Data Locking tab allows Preparers to set the criteria for locking a file. For example, if the file carries forward or is transmitted.

Variance tab

The Variance tab lets you set the minimum amount of money you can make. You can choose between dollars or percentages.

Disclaimer tab

The Disclaimer tab includes the option to include a standard disclaimer on all prepared forms.

T1/TP1 Review tab

The T1/TP1 Review tab allows the setting of the Variance Thresholds, using the criteria of Dollar and/or Percentage.

Using Options Packages in ProFile

An options package is a file that saves customized ProFile settings. These can include office details, printing options, database settings, and template and module settings.

Creating an options package means that your ProFile settings can be used by you or by others without having to recreate any preferences. This can be extremely helpful if you have staff to ensure they have customized access to what they need in their ProFile setup.

How do I use the option package?

An options package can be used a few different ways:

- Saved on a shared network/server where everyone has access to it
- Saved on a terminal server where everyone has access to it
- Saved locally to a single computer that isn't on a shared network/server

Depending on which use is selected, multiple customers can work with ProFile in the same consistent manner, or an individual user can work with ProFile in a manner specific to themselves.

Types of options packages

There are three types of options packages in Profile: **Individual**, **shared**, or **custom**.

Individual options packages save on an individual computer and are loaded when ProFile launches.

Shared options packages save to a network/shared server where one or more individual computers have access to the package. This is the ideal option if you are using a network environment, Client Server, or Terminal Server environment.

Custom options let the same ProFile options work even if a computer isn't connected to a network, server, or terminal server. A Profile Customer creates custom options packages in different locations and instructs ProFile which to use.

Creating an Options Package in ProFile

1. Open ProFile.
2. Select **Options Administration...** from the **Options** menu, the **Options Administration** window displays.
3. Set the necessary options for the package (Any modifications to items in the **Options** or **EFILE Options** are available to customize. For example, template use, pricing, database, etc.), these selections will become the settings in the new options package.
4. Select the options package type (**1**, **2**, **3** or **4**).
5. Check the option **Include Preparer and discounter name with Option packages**, if applicable.
6. Check the option **Prompt to save changes**, if applicable. This feature only works with package types 2, 3, and 4. Selecting the option prompts the user to save any changes made to an options package when closing ProFile.

! Note: Any changes made to an options package prior to ProFile being closed aren't saved if the **Prompt to save changes** feature isn't activated. Customers must explicitly use the **Save** function to save any changes or they will be lost when closing Profile.

7. Select **New**.

The **New Settings** window displays.

8. Enter the name of the new options package.
9. Select **OK**.

✓ The new options package file saves to the designated location and displays in the **Options Packages** list.

! Tip: The naming convention of Options packages can vary based on role, individual, type of return, etc. Deciding how your firm is structured and the roles/responsibilities of team members will determine how you set this up.

Managing Options Packages in ProFile

Options package management includes several tasks that can be undertaken, including:

- Creating a new options package
- Loading an options package
- Updating an existing options package
- Deleting an options package
- Transferring an existing options package

Using Custom Option Packages in ProFile

A computer that is using an options package on a network/server/terminal server will lose access to it if the computer disconnects from the network/server/terminal server.

However, ProFile can be set to access an alternate local options package (or packages) on the individual computer's hard drive as a substitute to the network/server/terminal server options package. ProFile will first search for the designated options package on the network/server/terminal server. If that options package isn't available, ProFile will search for the next options package on the list.

! Note: ProFile doesn't synchronize changes between options packages. Any changes to a local options package while disconnected from the network/server/terminal server aren't saved in the network/server/terminal server options package.

Managing files in multiple options packages

When the computer connects to a network or server, use the options package stored there.

When the laptop disconnects from the network/server/terminal server, users can specify an options package stored locally on the laptop itself.

However, be aware that by having two different sets of options, you are using two different databases. Files created or changed when you disconnect from the network/server/terminal server won't be listed in the database stored on the network/server/terminal server.

Creating and assigning multiple options packages

ProFile users who will disconnect at some future time from a network/server/terminal server and continue working will need to create at least two options packages: one for connected network/server/terminal server use and one for when disconnected from the network/server/terminal server. This allows the disconnected work to use the same options package settings as that on the network/server/terminal server.

Password Protecting Options and Options Packages in ProFile

Any Options Package can be password-protected. This prevents unauthorized users or other Preparers from altering the options package.

This feature protects both the **computer options** and the **options package**.

Password protecting options packages:

1. Select the **Options password...** item from the **Options** dropdown menu.

The **Set Options/Delete Password** window displays.

2. Enter a password in the **Password:** field of the **New password** section.
3. Enter the same password again in the **Confirm:** field.
4. Select **OK**.

The password is saved and the options package file is protected from changes and deletion. A prompt requesting the password displays any time changes are made to the settings.

Note: This password applies to Options packages only. It isn't an EFILE password.

The screenshot shows a dialog box titled "Set Options/Delete Password" with a question mark icon and a close button (X). The dialog is divided into two main sections. The first section, "Old password", contains a "Password:" label and an empty text field. The second section, "New password", contains a "Password:" label with a text field that has a blue cursor, and a "Confirm:" label with an empty text field. Below these sections is a light gray box containing a lightbulb icon and the text: "EFILE Options (including the set up of login information) are configured through the EFILE > Options menu." At the bottom of the dialog are two buttons: "OK" and "Cancel".

Managing Printing in ProFile

Print Setup in ProFile

1. Select the **Print Setup...** option from the **File** dropdown menu.

The **Print Setup** window displays.

2. Select the correct year for the module, and the available print settings display.

Applicable forms, jackets, letters, and more that are applicable to the module are listed under the **Category** column.

3. Select each available category and set/approve the margin settings, font scaling, position, duplexing, and other printing values.
4. Select **OK** to save the print setup settings.

Using Print Sets in ProFile

Form selection overview

The Form Selection menu allows Preparers to set print options for forms for each module as well as different print jobs.

Selecting templates:

1. Select the **Form Selection** option from the **Options** dropdown.

The **Form Selection** menu displays.

Using form selection

A list of print options displays in the **Form Selection** menu.

This list includes the ability to set the print options for **File**, **Client**, and **CRA**. Individual forms are listed, including the option for setting language.

Toggle to any box to activate a print option for the form.

At any time, you can restore your defaults by selecting **Set Defaults**.

! Tip: Select **F1** on any field to learn more about it.

Items in a print set can be re-ordered by dragging and dropping them into the order you'd like them to appear.

You can change the status of a return after printing.

There are 2 additional print set names you can use to customize any other set types you may require in each module as well.

If the print set settings will be the same in the next year, you can use **Carry forward**.

The screenshot shows the 'Form Selection' dialog box. At the top, there are four tabs: '1. 2025 T1/TP1', '2. 2023-2026 T2', '3. 2025 T3/TP646', and '4. 2025 FX/Q'. The left sidebar contains a 'Print Job' section with a dropdown for 'T1 Paper', a 'Status after printing' section with a 'Take snapshot' checkbox and a 'Change the status to' dropdown set to 'Unchanged', and a 'Print Set Names' section with five input fields labeled '1: File', '2: Client', '3: CRA', '4:', and '5:'. Below this is a 'Printing Tips' section with a lightbulb icon and text: 'If the template is not printing, check the print condition on the templates as well as on the form selection.' and a 'Next' button. The main area is titled 'Form Selection Details' and has columns for 'File', 'Client', 'CRA', and a list of forms. The forms listed include DC905, T1-1,2, T1-3,4,5,6,7,8, T1 Condensed, T1159, RC71-1, RC71-2, RC72-1, RC72-2, T1132, T1134, T1134Supp#1, T1135, S2, and S3. Each form has a corresponding description. At the bottom, there is a 'Select this job when' section with '(EFILE=0)' and a row of buttons: 'OK', 'Carry-forward', 'Set Defaults', 'Cancel', and 'Help'. The 'Carry-forward' button is highlighted with a red box.

Printing Different Copies

ProFile users can set the print job options for returns and forms.

Setting print job options:

1. Open the return in ProFile.
2. Select the **Print...** option from the **File** dropdown menu.

The **Print Selection** window displays.

3. The **Print Job** section in the top-left corner of the window displays the print job types (for example, **T1 Paper**).

Note: The province of residency selected on the return determines the available print jobs. For example, setting **Quebec** as the province of residency displays TP1 print jobs.

4. Set the print job settings.

Advanced and simplified settings:

1. Select **Advanced** in the bottom-left corner, and the advanced print job options display.
2. To return to the simplified view, select **Simplified**.

Printing jobs:

1. Select **Set Defaults** to set the selected print job options as the default.
2. Select **Print**.

Printing to PDF/Email in ProFile

Setting print to PDF options:

1. Open the return.
2. Select the **Print/Email PDF...** option from the **File** dropdown menu.

The **Print Selection** window displays.

3. Several options for PDF printing are available, including:
 - Setting the print job type in the top-left menu (Print Job)
 - Setting print job options under the Options section
 - Setting the print job resolution under the Resolution dropdown menu
 - Emailing the print job to an email address entered in the email field
4. Set the necessary options for PDF printing.

Previewing the PDF:

1. Select **Preview**, a preview copy of the PDF displays.
2. Review the form for any issues or needed corrections.

Advanced menu option:

1. Select **Advanced**.

✓ The window expands to display the advanced print to PDF options.

Building the PDF:

1. If there's no email listed in the **Email Address** field **Build PDF** activates.
2. Select **Build the PDF**. The PDF is created and the path of the file name displays.
3. Select **OK**.

✓ The build of the PDF completes.

Email the PDF:

1. If there is an email listed in the **Email Address** field, **Email** activates.
2. Select **Email**. The file is sent to the designated folder and a PDF is generated.
3. Select **Open PDF folder** in the window to find where the file is located.
4. Attach the file to an email.

Related Articles:

Review our [support article](#) to learn more about the Archive PDF functionality.

Setting up Duplex Printing in ProFile

Duplex printing allows Preparers to print returns on both sides of a single sheet of paper.

Setting Duplex Printing Options:

1. Open ProFile.
2. Select **File**, and then **Print Setup**. The **Print Setup** window displays.
3. Select the desired tax year and module from the tab menu (for example, **1. 2025 T1/TP1**).

A list displays below the tabs, detailing available forms, letters, and more.

4. Uncheck the **Always use Default Windows Printer** above the **Category** heading.
5. Select the first item listed under the **Category** heading (for example, **T1 jacket**).
6. Select **Properties** under the **Printer** heading.

The **Print properties** window displays.

7. Some printer manufacturers may require you to select the duplex printing option from the options presented. Adjust settings as required based on your printer.
8. Select **OK**. In the **Print Setup** window, check the **Use printer duplex** settings box. This activates the duplex settings. Repeat the duplex printing configuration for each applicable option under the **Category** list (for example, **T1 forms**, and **Letters**)

Printing Slips in ProFile

When sending a slip to print from ProFile, the printout may be cut off, print a blank page, or not print at all. This is due to the slips' official size conflicting with the printer settings.

Changing default slip print settings:

1. Select the **Print Slips Setup...** option from the **File** dropdown menu. The **Slips Print Setup** window displays.
2. Select the tax year from the module dropdown menu in the top bar.
3. Select the slip type from the tab menu (for example, **T4PS**). Update and apply the necessary print slip settings.
4. Select **Test** to test print the settings.
5. Select **OK** to save the settings.

Printing the slip:

There are four printing options available under the File dropdown menu:

- Print...
- Print / Email PDF...
- Print Slips...
- Print Slips / PDF

Each option opens a print settings window. Update and apply the necessary print slip settings.

Select **Print** or **Build PDF**. The slip prints or builds a PDF file.

Reviewing the printed slip (if PDF printed):

1. Open the generated PDF in the PDF-viewing software (for example, Adobe Acrobat). Ensure that the PDF is set to fit on the page.
2. Select the desired paper size under the **Page Setup** option.
3. Match the desired paper size under the **Printer Properties** option.

Keyboard Shortcuts in ProFile

If you handle a lot of client files, learning keyboard shortcuts in ProFile can save you time.

Action	Shortcut Command

Using Multiple Windows in ProFile

The multiple windows feature allows the Preparer to view two ProFile returns, each in its own window. This is a useful feature when the Preparer needs to see two returns side-by-side for clarity or comparison. For example, a Preparer can open two T1 returns and view them at the same time, rather than having to toggle back-and-forth between them.

Opening multiple windows outside ProFile Using Icons:

1. Open two or more returns in ProFile.

2. Select the **tile window icon**  .

The returns open in individual windows on the desktop.

3. Select the **launch window icon**  in each window to open the return on a separate screen.

4. Select the **return window icon**  to bring the return back into ProFile.

Opening multiple windows inside ProFile

Open two or more returns in ProFile.

1. Select the appropriate option from the **Window** dropdown menu. These include:
 - **Tile Horizontally:** The returns are stacked on top of each other
 - **Tile Vertically:** The returns are stacked beside each other
 - **Cascade:** The returns each open in a smaller window that can be manipulated
 - **Launch Current Window:** the current return opens in a new window outside ProFile

Toggling between multiple open returns:

1. Select the **Window** dropdown menu.

Any open returns display at the bottom of the menu. The active window is bolded.

2. Select any return listed in the menu to display it.

 **Note:** You can't open more than 1 T2 return if you are using Corporate Linking as it'll break the link.

Understanding Colours in Data Fields

You may notice several text fonts or fields have different colours as you prepare returns. Understanding those colours will help you determine where information is coming from and what is happening within the return.

Black Text - This colour text symbolizes data that has been or needs to be manually entered. It can also be referred to as free-form text.

Blue Text - Data that flows from another part of the return or is calculated will appear as blue text. Depending on which module or return you're completing, that information can come from a linked return, form or schedule. Double-clicking on the field will take you to the source.

Green Text - This field is locked and cannot be altered. This information could be stored within your settings, such as Preparer or EFILE information. It can also be information within a return that can't be altered such as a Business Number on the source form. Double-clicking on the field may take you to the source, if available.

Red Text - Any override of information will turn the text red. Ensure the override was not an error. A Diamond symbol will also show to the right of the data field.

Purple Text - Any information that has been carried forward appears in this colour.

Yellow Highlighted Fields - These are a visual indicator that something has a potential action required or information that should be reviewed. When you hover over a yellow field, an additional information box appears with more information.

Green Highlighted Fields - Calls attention to fields that need additional review. Information related to the field is obtained by hovering over the field. It can also symbolize additional attachments such as tapes, memos, and documents that are attached to the field.

Using Review Marks in ProFile

Preparers assign review marks while undertaking returns in ProFile. Preparers use review marks to show if the field's information is correct and checked. They also use review marks to show if the field needs more information or data from a client.

Note: If you have staff within your firm, review marks can be used by Reviewers, Team Leads, or Partners to help facilitate internal collaboration.

Review marks appear on the ProFile top toolbar menu as red icons: Checkmarks, an X, and a question mark.

Types of review marks

There are **four types of review marks** available in ProFile:

- **Preparer sign-off:** The Preparer of the return must provide sign-off
- **Partner sign-off:** The partner of the return must provide sign-off and has a little tail at the top of checkmark
- **Correction required:** The field requires a correction (amount, etc.)
- **Question:** The data provided in the field prompts a question or clarification

Using review marks

1. Open the return that requires review marks.
2. Select the appropriate review mark from the top toolbar menu. The mouse pointer changes to an arrow with the corresponding mark attached.
3. Select the appropriate field in the return to apply the review mark. The review mark appears over the black status box.
4. Save the return.

50.00	✓
No transfer	✓
200.00	✓
300.00	✓
455.00	X
500.00	?

✓ The added review marks are retained in the return until addressed/removed by the Preparer.

Tip: Use memos in addition to review marks for further clarification. For example, if there's a question, use a memo to attach a question in that field.

Attaching Tapes in ProFile

Using ProFile, Preparers can attach tapes to fields. The Attach Tape feature functions much like an adding machine that performs and records calculations.

Tape options are managed in the **Options -> Environment... -> Edit** tab in ProFile.

Attaching tape:

1. Open a file in ProFile.
2. Select field to attach a tape.
3. Right-click, and select the **Attach Tape** option from the menu.

The **Tape** window displays.

4. Enter a **description** (for example, **Shirts**) into the left-side field of the table.
5. Enter a **value** (for example, **\$500.00**) into the right-side field of the table.
6. Select the **<Tab>** key to cycle through the fields and start a new row.
7. When all fields are completed, select the **<Enter>** key. The total is calculated and inserted into the selected field on the form.

✓ The background color of the field changes to green when a field has a tape attached.

⚠ **Note:** When you select **Post**, the total will show on the line. If you leave it unchecked, the tape calculations are attached, but the value stays at \$0 until you post the tape. The field remains highlighted to show a tape is attached.

Once a tape has been attached, you may hover over the field to see the details of the tape. All fields will be highlighted in green.

⚠ **Note:** Only the sum of a tape—not individual entry details—are printed or transmitted with the tax return data. The details and descriptions are for Preparer reference only.

Description	Value	Sign
Shirts	500.00	+
Stickers	85.00	+
Sunglasses	15.00	=
Total	600.00	

☒ Descriptions
 ☒ Post
 Decimals: 2

Ok Cancel Clear

600.00	Shirts	500.00	+
0.00	Stickers	85.00	+
0.00	Sunglasses	15.00	=
0.00	Total	600.00	

Clearing an Attached Tape

1. Open the file with the attached tape in ProFile.
2. Select the field from which the attached tape is to be cleared.
3. Right-click, and select the **Attach Tape** option from the menu.

The **Tape** window displays.

4. Select **Clear**, the tape will clear.
5. Select **OK**. The window closes and the tape clears from the field.

Copying a Tape from One Field to Another

1. Open the file with the attached tape in ProFile.
2. Select the field with a tape attached.
3. Right-click, and select the **Copy Memo/Tape** option from the menu.
4. Select the destination field for the copied tape.
5. Right-click the destination field and select the **Paste Memo/Tape** option from the menu.

The tape attaches to the destination field.

Note: When pasting a tape to a destination field, the value of the destination field will be set to the total in the tape. If that destination field is also a calculated field, ProFile sets the override flag on that field.

Attaching Memos in ProFile

Preparers can attach memos to fields on all ProFile forms. Memos are short notes and reminders, like sticky notes. Memos are useful for leaving notes or reminders for partners or reviewers to read, and can also facilitate collaboration within the firm. Memos can also be used in conjunction with review marks or tapes.

Note: Memos don't print or transmit over the internet with a tax return file, or impact the calculation of a return.

Memo text displays in a pop-up window when hovering over a field with a memo.

Fields with attached memos also appear in the Memo and Summary tabs in the Active Auditor.

Attaching a memo

1. Right-click in a field and select the **Attach memo** option from the menu.

The **Memo** window displays.

2. Enter the memo content into the text field in the **Memo** window.
3. You may **Insert Date Stamp** if you wish to track when memos are posted, or if additional comments may be added.
4. If review marks are required at this stage, they may be added.
5. Select **OK**.

The memo is attached. The color background of the field changes to green.

Clearing a memo

1. Right-click in a memo field and select the **Attach memo** option from the menu.
2. Select **Clear**.
3. Select **OK**.

✓ The memo text clears from the form field.

Using Intuitive Copy in ProFile

The copy and paste function allows Preparers to save time when it's necessary to create a copy of a business statement already in use.

For example, a Preparer may be completing business statements for non-spousal partners in a T1 return. When using copy and paste, it's not necessary to re-enter the same business data in both files.

Using Form copy and paste:

1. Open ProFile.
2. Complete the necessary statement in the client file.
3. Select the **Copy Form** option from the **Edit** dropdown menu.
4. Open the data file for the partner.
5. Open a blank copy of the same statement in the partner's file.
6. Select the **Paste Form** option from the **Edit** dropdown menu. The blank form populates.
7. Edit/complete the populated form for this client.

ProFile business statements have a section for partner information. This includes the partner's name, social security number, and how much of the partnership's money is shared. Intuitive copy and paste lets this information be copied quickly into each partner form.

1. Finalize all business statement data.
2. Select the **Intuitive copy** option from the **Edit** dropdown menu. The statement's data copies.
3. Open the business statement in the partner's file.
4. Select the **Intuitive paste** option from the **Edit** dropdown menu, the data is copied into the partner's statement.

 **Note:** ProFile automatically adjusts all amounts and partner details. Attached memos and tapes also copy to the partner's business statement.

Attaching Hyperdocs in ProFile

ProFile's HyperDocs feature lets you attach many documents in any format to a form or field in a return. Certain documents may be required with the Provincial portion of a tax return, such as the CO-17. Other times, you may want to attach documentation for your own records.

Note: HyperDocs are stored with the Preparer files but aren't included with T1 EFILE or TP1 NETFILE transmissions. Hyperdocs is available in the T1, TP1, T2, and CO-17 modules.

Attaching HyperDocs:

1. Open a form in ProFile.
2. Select the field to attach a HyperDoc.
3. Select the **HyperDocs...** option from the **File** dropdown menu.

The **HyperDocs** window displays.

4. Select **Add**  in the top-right corner of the window.
5. Browse to the location of the document to attach. Select the document, and then select **OK**.

The **options** window displays.

6. Select one of the options presented:
 - **Embedded** documents open in read-only state and can't be edited in ProFile
 - **Linked** documents open from the source and can be edited in ProFile. Any changes are saved in the source document in the file location
7. Select **OK**. The document is attached to the field as a HyperDoc.

If you would like to see the field highlight with the document linked directly to the field, right-click on the field and select **Attach to HyperDocs**.

✓ The field displays in green color, indicating the HyperDoc attachment. You can hover over the field to see the name of the document.

Detaching HyperDocs from a field

1. Right-click on the field with the attached HyperDoc.
2. Select the **Detach HyperDoc** option from the menu.

The document detaches and the field restores to its default color.

Note: The document remains attached to the form but isn't linked to a specific field.

Removing HyperDocs from a form

1. Select the **Hyperdocs...** option from the **File** dropdown menu.

The **HyperDocs** window displays.

2. Select the document from the HyperDoc list of attached documents.

The red **X** logo in the top-right corner activates.

3. Select the red **X** logo.
4. Select **Yes** to confirm the removal of the document.

✓ The document detaches from the form.

Using the Active Auditor in ProFile

Profile's Active Auditor displays messages that relate to the data file. These include messages that aren't checked, warnings, mistakes, fields that aren't checked, memos, fields that have review marks, and messages about EFILE.

Error messages or errors that may restrict processing of the return display in red text.

Accessing the Active Auditor

The Active Auditor is accessed four ways:

- Select the **Active Auditor**  icon menu
- Right-click on any form and select the option **Show Auditor** from the menu
- Select **Show Auditor** from the **Audit** dropdown menu
- Use **F9** as a hotkey to open the auditor

Selecting Active Auditor Options

Note: Setting the Active Auditor options in one location applies to all open ProFile Modules (T1, T2, etc).

1. Select **Environment...** from the **Options** dropdown menu.
2. Select the **Audit** tab, the **audit options** window displays.

Each section of the audit options window has pre-set default selections.

Note: Modules may display different tabs in the Active Auditor based on the module itself, rather than settings.

Preferences settings

The Preferences section of the Audit tab includes settings that affect the display of warnings.

Note: ProFile recommends the Show Auditor Tabs option be selected to provide the clearest feedback and sign of errors on forms.

Summary Tab Includes settings

The Summary Tab Includes section of the Audit tab includes options that display in the auditor toolbar. Each of the selected options displays related errors in the corresponding Active Auditor tab.

Prevent Filing settings

The Prevent Filing section of the Audit tab includes options that halt the filing of the form. Errors created by the violation of these options must be cleared before filing can take place.

Remove Audit Messages settings

The Audit tab has settings about who can remove errors in the Active Auditor for a form.

Summary	Warnings	RSI	EFILE	T1135	T1134	T106	AT1 Net File	CO-17 Internet	Notices	Sign-offs	Issues	Overrides	Memos	Data Import	Carry forwards	Tapes	Variance
T2 RSI #0240002	S101	Complete GIFL Schedule 101 for a first return after incorporation. If this error is not corrected, the CRA will delay the processing of the T2 return.															
T2 RSI #2001018	T2	The business number is not valid. If the corporation is not registered, please enter NR; NA is not valid. An invalid business number may result in delayed processing of this return with the CRA.															
T2 EDI EFILE#1003		This return has prevent filing audit messages (shown in red in the active auditor). To clear this error, address or sign-off these messages.															
Warning	Info	The business number is not valid. An invalid business number may result in delayed processing of this return with the CRA.															
Warning	S40	For accurate calculation of the CCPC one month extension of balance due, complete the prior year business limit reduction.															

Clearing Active Auditor messages

Error messages display as red text in the Active Auditor tabs.

1. Double-click on an error warning in the tab.

The error circles in red on the form.

2. Resolve the error. The specific error in the tab details the issue.

In some cases, the error – as identified by ProFile – may be acceptable to the Preparer or the client. For example, an RRSP amount may be okay, but ProFile says the amount isn't within the range the CRA expects and says it's an error.

In such cases, the individual selected in the Remove Audit Messages section of the Audit tab can sign-off, or approve the error.

Setting up Data Monitors in ProFile

ProFile's Data Monitor feature displays any number of fields at the bottom of the Edit window. By default, the software monitors several key fields in the client file. Preparers can observe the totals for these fields change while working on different forms in ProFile.

Selecting fields for data monitoring

You may decide to monitor different fields. Then, as you change other parts of the file, look on the screen to see how those changes affect the fields you are watching.

A monitor amount that appears bold means that the last recalculation affected the field. A monitor amount that appears in red is a negative number.

Hint: right-click on the **Data Monitor**, and then select **Monitor** from the menu to access several options, including the option to rename the monitor field description. This makes it easy to remember what's being observed.

To monitor a data field to the Data Monitor:

1. Place your cursor in the field you'd like to monitor
2. Select **+** to the right of the **Data Monitor**. The field is added to the **Data Monitor**.
3. To replace another field already on the **Data Monitor**, drag the field information with your cursor to that **Data Monitor** cell and release your mouse. The field code (or name, if there's one), along with the current value of the field, will appear in the monitor cell.

Managing ProFile Security Settings

Data/File Locking in ProFile

Data locking automatically locks a return to prevent any changes from occurring after the return's status is set.

Setting the data locking options:

1. Open ProFile.
2. Select the **Module...** option from the **Options** dropdown menu.

The **Module Options** window displays.

3. Select the appropriate module and year from the tab menu in the top of the window (for example, **2025 T1/TP1**).
4. Select the **Data Locking** tab.
5. Select the appropriate option under the **Client Status** list.
6. Select the appropriate option under the **EFILE Status** list.

Note: One or more options may be selected from the list.

7. Select **OK**.

 The file will lock when the selected criteria occur.

Setting the Print locking options:

1. Select the **Form Selection...** option from the **Options** dropdown menu.

The **Form Selection** window displays.

2. Select the appropriate module and year from the tab menu in the top of the window (for example, **2025 T1/TP1**).
3. Select the dropdown menu arrow in the **Status after printing** section. The menu will expand.

4. Select the appropriate option from the menu.
5. Set the appropriate options for each module.
6. Select **OK**.

 After the return is printed, the return locks to the selected status.

PDF Locking in ProFile

Data locking automatically locks a return to prevent any changes from occurring after the return's status is set.

Setting the PDF locking options:

- Open ProFile.
- Select the **Environment...** option from the **Options** dropdown menu.

The **Environment Options** window displays.

- Select the **PDF** tab.
- Select the appropriate option under the **PDF Security** option list:
 - None
 - Client Name + SIN/BIN/TAN/PN
 - Client Name + DOB/Fiscal EndDate
 - User Specified

Setting Owner Password:

The Set Owner Password option provides an additional level of security to prevent a locked PDF from being edited.

1. Enter a password in the **Set Owner Password** field. Customers will require this password to open a file, in addition to any password set in the **PDF Security** option list.
2. Select **OK**. The PDF locking selection applies.

Managing ProFile's Password-Protection Function

Frequently Asked Questions

Which modules support access to password-protected files?

Access by features to password-protected files applies to T1, T2, T3, and FX modules.

Which tax years support access to password-protected files?

Access by features to password-protected files applies to tax years 2015 and onwards.

Which features currently support access to password-protected files?

Currently the Hub and Corporate Linking features support access to password-protect files.

Applying generic password protection to files

Applying a generic password permits all future or updated files to be accessible by ProFile's features.

1. Open ProFile.
2. Select **Environment...** from the **Options** dropdown menu.
3. Browse to the **Security** tab.
4. Select the **Allow password protection for return(s)** checkbox.
5. Select the **Create a generic password for return(s)** checkbox. The **Enter Password** and **Confirm Password** fields activate.
6. Enter a password and confirm it.

Note: Select the **Show Password** link to display the password as it's entered. Select the link again to hide the password.

7. Select **OK**. The password-protection feature activates. Users can now apply password-protection to files.

Applying password-protection for files

1. Complete a new file in ProFile.
2. Select the **Save As...** option under the **File** dropdown menu. The **Save As** window displays.
3. Select the **Use generic password** checkbox in the bottom-left corner of the window. The password stored in **Environment Options...** is applied.

Note: Select the **Show password** link to display the password as it's entered. Select the link again to hide the password.

4. Select **Save**. The file saves with the new generic password and is readable by the selected ProFile features.

Note: Be sure you choose a password that you can remember. If it's lost, it can't be recovered, even by Intuit.

Intuit "One Account" Login

The Intuit "One Account" tool allows access to several Intuit products and services with a single log in and password.

One Inuit products and services

The One Account tool provides access to the following:

- ProFile support community
- QBOA
- QBO
- TurboTax Online

One Account access:

Customers can create a One Account when accessing a supported service for the first time.

The **One Account** login window displays when accessing a supported service.

Select the **New to Intuit? Create an account** link to create a new account.

! Note: The same email should be used to purchase and login to any Intuit product. If you need to change the email or any account information associated with your One Intuit account, please review this [support article](#).

The screenshot shows a web browser window titled "Sign In" for "Intuit Accountants". The page features the Intuit logo and the heading "Let's get you in to Intuit". Below this is a text input field labeled "Phone number, email, or user ID". A note states "Standard call or SMS rates may apply." There is a checked checkbox for "Remember me" and a blue "Sign in" button with a lock icon. Below the button, a disclaimer reads: "By selecting Sign in for your [Intuit Account](#), you agree to our [Terms](#). Our [Privacy Policy](#) applies to your personal data." There are two links: "Try something else" and "New to Intuit? [Create an account](#)". At the bottom, it says "Invisible reCAPTCHA by Google" with links to "Privacy Policy" and "Terms of Use". The footer contains links for "Legal", "Privacy", and "Security".

Using Backup to Cloud Feature in ProFile

Backup to Cloud is a new ProFile feature replacing the existing ProFile Review function.

ProFile users can safely backup as many files and returns as they want on the virtual cloud. They can retrieve the files at any time.

What's the Cloud?

The Cloud is ProFile's online repository that provides unlimited file storage and is available for backup and retrieval 24-hours per day.

What type of files can I back up?

Users can backup files for any module (T1, T2, T3, or FX) to the Cloud. Other modules, such as T3 and FX, can only undergo backup via the **Save As...** option in ProFile.

What years are supported?

Backup to the Cloud only supports the current year module, not previous years. However, if you have used the backup in previous year, those backups would continue to exist.

Is there any limit to the number of files I can back up at one time?

Users can back up 80 files at one time to the Cloud.

Do I need to make a new Intuit account to use the backup to Cloud feature?

No, users can use the same Intuit account used for ProFile Review.

I backed up a file to the Cloud...is the original file on my hard drive deleted?

No, the original file is still stored on your hard drive where it was.

I deleted a file in the Cloud...is it gone forever?

The file only deletes from the Cloud. It doesn't delete from the local storage directory.

Setting Options for Backup to Cloud

The **Backup to Cloud wizard** displays upon starting ProFile.

1. Select the **Environment Options** link to set options for backup, the **Environment Options window displays**.
2. Browse to the **Backup to Cloud** tab.
3. Select the **Enable backup to Cloud for this computer** option.
4. Select the **Automatically back up returns on saving** option to enable the auto-backup option. This isn't mandatory, but it helps make sure that any time the file is saved on the desktop that it's also backed up to the Cloud.

Backing up a file to the Cloud:

1. Open the file to upload in ProFile.
2. Select the **Save As...** option from the **File** dropdown menu.

The **Save As** window displays.

3. If you selected the automatic backup option during setup, you now see a backup option when saving the file.

Note that the **Enable backup for this file** option is already selected, and the status will show **Ready to backup**.

4. Select **Save**.

A confirmation message indicates the backup has been successful.

If you didn't select the automatic backup option during setup, you will see an option when saving the file in the future to back up to the Cloud or save only to the desktop.

5. Users can either select the **Enable backup for this file** option or leave it unselected.

6. Select **Save**. The file is saved either to the desktop only or to both the desktop and the Cloud.

 A confirmation message indicates the backup was successful.

Related Articles

Review our [support article](#) for more information on backing up multiple files, reviewing files, and downloading or deleting files from the Cloud.

What Can Undergo EFILE in ProFile

The CRA makes changes each tax year as to what can (and can't) undergo the EFILE process.

ProFile maintains a support article that addresses the EFILE status of all modules, as well as independent forms that undergo EFILE separately from the return (for example, **T1135**, etc.).

Review this [support article](#) for a full list of forms and years that you can EFILE from ProFile.

Viewing EFILE Reports in ProFile

EFILE reports provide Preparers with the date, time, and the confirmation number of the EFILE from CRA.

Note: EFILE reports are no longer available for returns after 2023. You are able to access previous reports for 2023 and previous returns.

To view reports from files used during current EFILE and NetFile services:

1. Select the **Reports** option from the **EFILE** dropdown menu , and then select the **Current** option.

The **Open EFILE Report** window displays.

2. Select the type of file in the **Files of type** field from which you want to generate a report:
 - EFILE Submission files (*.TAX)
 - TP1 NetFile Submission files (*.EAX)
 - Session logs (*.SLG)
3. Session logs are descriptions of events that occurred while you were connected to the NetFile Québec website. If you choose Session logs, select a session log and select **Open** to view the full report.
4. For other file types, select the option and select **Open**. ProFile displays the report information.
5. Select **Print** from the report to print a copy for your records.

Setting up a shared EFILE folder

If you installed ProFile onto a shared network folder, you can use the default folders created during installation. For each module that uses EFILE, you will find appropriate EFILE folders within each module's files folder.

Alternatively, you can use any shared folder on your network as a shared EFILE folder. To do so, you must specify that folder on each workstation.

For T1/TP1 returns

1. Select **EFILE**, and then **Options....**
2. Select the option for the EFILE service that you want to configure from the left-side menu.
3. Select the **Common** option under the **T1** section of the **General** menu.
4. Select **Browse**. The **EFILE Directory** window displays.
5. Browse to the folder used as a shared EFILE folder.
6. Select **OK**.
7. Select **OK** in the **EFILE options** window. The folder is assigned.

For T2 returns

1. Select the **T2 EFILE** option under the **T2** section of the **General** menu.
2. Select **Browse**. The **EFILE Directory** window displays.
3. Browse to the folder used as a shared EFILE folder.
4. Select **OK**.
5. Select **OK** in the **EFILE options** window. The folder is assigned.

Using Flexible Licensing in ProFile

Flexible licensing suspends a ProFile license **temporarily** on one computer so the license may be activated on another computer... without having to delete the license or purchase an additional seat.

For example, you can suspend your Profile license on an office computer and activate the same Profile license on a laptop to meet with clients in the field. When you return to the office, simply suspend the license on the laptop and resume the license on your office computer.

What's a Seat?

The number of seats determines the maximum number of users that can be activated on the License Key combination. When you purchase a base license, you get one seat. When you purchase additional licenses, you get an increase to the number of seats that can be activated on your license.

What's required to use Flexible Licensing?

Flexible licensing requires:

- Tax year 2016 or later license (earlier tax years aren't supported at this time)
- ProFile version 2016.0.3 or later
- Internet connection during activation and suspension of license

Can I still work offline?

Yes. Once you have activated your license you can use ProFile without an Internet connection. Features like **Auto-fill my return** and EFILE will still require an Internet connection to work.

What does flexible licensing cost?

There's no cost for flexible licensing. The feature is included as part of your license purchase.

How many machines can I install ProFile on?

Unlimited. ProFile is a free download, but the licensing determines what can be done with the program. You can add your licenses to as many computers as you want with flexible licensing. You can only have the number of licenses you paid for active at the same time.

Is Flexible Licensing going to be on by default?

No. The flexible licensing option is activated manually.

Flexible Licensing: Enable during Activation

Flexible Licensing can be enabled during the ProFile activation sequence, for Preparers who want to start using the feature right away.

Enabling Flexible License during Activation:

1. Enter your product code and license key during activation.
2. Select **Next - Setup Flexible Licensing**.

The **Flexible Licensing Settings** window displays.

3. Select the **Enable flexible licensing on this computer** check box. Select either **Manual** or the **Automatic** mode to activate your choice.
4. The Manual mode displays the choice of two additional options:
 - **Prompt me every time when I close ProFile** - selecting this option results in ProFile prompting the user to suspend your license when closing the application
 - **Don't prompt me. I'll do it manually** - selecting this option requires the user to suspend their license manually themselves when closing the application
5. Select **Save** to save your preferences.

Learn More'. A checkbox labeled 'Enable flexible licensing on this computer' is checked and highlighted with a red box. Below it, the 'Manual' option is selected with a radio button. A 'Pick one' section contains two radio buttons: 'Prompt me every time when I close ProFile' and 'Don't prompt me. I'll do it manually.' The 'Automatic' option is also listed with a radio button. At the bottom, a 'Save' button is visible. A note at the bottom states: 'You can access these settings by clicking the Help > Configure Flexible Licensing menu item above. Please Note: In order for this functionality to work your computer must be connected to the internet.'"/>

Flexible Licensing: Suspending the License Automatically

The Automatic mode automatically suspends or activates your licenses when you close and open ProFile, respectively.

Note: A working internet connection is required to suspend a license.

Suspending the License Automatically:

1. Select the **Configure Flexible Licensing** option from the **Help** dropdown menu.

The **Flexible Licensing Settings** window displays.

2. Select the **Enable flexible licensing on this computer** box.
3. Select **Automatic** mode.
4. Select **Save** to save your preferences.
5. Close the ProFile application. You can do this by selecting the X icon on the application, or by choosing Exit.

The ProFile application closes.

6. A message indicating that your license is suspended on the computer displays.

Flexible Licensing: Suspending the License Manually

Manual suspension occurs when the user suspends the licensing themselves in ProFile.

Note: This process needs to be undertaken each time ProFile is closed to ensure the Flexible Licensing is properly suspended. Proper suspension ensures the license can be activated on another computer.

Suspending the License Manually

1. Save any files being used in ProFile.
2. Select the **X** icon in the top-right corner of ProFile or select the **Exit** option under the **File** dropdown menu.

A prompt displays asking if you would like to suspend your license and work on another computer.

3. Select the **Yes** option.

A message displays, double-checking the license suspension can continue.

A confirmation message displays when the license is suspended.

Managing T1 Returns in ProFile

Overview of T1 Module in ProFile

What's a T1?

The T1 General Tax Form (usually referred to as a "T1") is used by individual Canadians to complete their personal income tax return.

It has five sections for personal and income information:

- **Identification:** For details including name, address, Social Insurance Number (SIN), and marital status
- **Total income:** For declaration of income, including employment, self-employment, disability, foreign income, and any others
- **Net income:** Where childcare expenses, union dues, and more are subtracted from total income
- **Taxable income:** Where allowable deductions like capital gains are subtracted from net income
- **Refund or balance owing:** Where it's determined if any money must be paid, or any money is paid back

Submission Dates for T1:

April 30 of the following year is the deadline for most individuals to file a T1 return, or June 15 of the following year for self-employed individuals and their spouses or common-law partners.

If April 30 falls on a weekend, the following Monday becomes the deadline.

If the individual owes money to the CRA, the due date of April 30 is the hard due date for filing.

Late payment results in penalties being applied by the CRA.

Authorizing or Canceling a Representative for T1

As of July 2025, Preparers will no longer be able to authorize or cancel a representative in EFILE software like ProFile. Preparers will need to receive permission via a client's CRA account. The form can still be printed or signed electronically through Intuit Sign. However, it can't be emailed through the software.

For more information, read the [CRA's documentation](#) regarding this process.

EFILE form MR-69 in ProFile for T1

The MR-69 form is the **Authorization to Communicate Information or Power of Attorney** form in ProFile.

ProFile users can upload a signed copy of the MR-69 for RQ to retain in their records using ProFile version 2019.3.0 or later.

Review our [support article](#) on the process for T1 and T2.

Completing the T183 Form

1. Select the **Form Explorer** option from the **GoTo** dropdown menu.
2. Search for **T183** and open the **T183 form** from the results.

! Note: most of the content for the T183 form sources from the Preparer information entered under the **Options > Environment...** menu.

3. Complete the T183 form.

Is it necessary to retain the T183 form?

A signed copy of Form T183 must be kept by the taxpayer in case the CRA asks for it.

! Tip: Use the **Search** bar to quickly find and add forms and schedules to your returns without using the top toolbar menu to increase efficiency.

1. Info **4. T183** **2. T1** **3. T4** **+**

Canada Revenue Agency **Agence du revenu du Canada** **Information Return for Electronic Filing of an Individual's Income Tax and Benefit Return** **Protected B when completed**

Tax Year : 2022

Did the taxpayer electronically sign the T183? ☐ Yes ☐ No

The information on this form relates to the tax year shown in the top right corner. Before you fill out this form, read the information and instructions on **page 2**. The individual identified in Part A (or the individual's legal representative) must sign Part F. Your electronic filer must fill out Part C and Part D before submitting your return. Give the signed original of this form to your electronic filer and keep a copy for yourself.

Part A - Identification and address as shown on your tax return (mandatory)

First name Santa	Last name Claus	Social insurance number 111 111 111
Mailing address: Apt number - Street number - Street name 1 Main St	PO Box 	RR
	City North Pole	Prov./Terr NT
		Postal code H0H 0H0

Get your CRA mail electronically delivered in My Account (optional)

Email Address:

By giving an email address, I am registering to receive email notifications from the CRA and agreeing to the terms of use on **page 2**.

Part B - Declaration of amounts from your Income Tax and Benefit Return (mandatory)

Enter the following amounts from your return, if applicable:

Total income (line 15000)	0 00	Refund (line 48400)	700 00
Taxable income (line 26000)	0 00	or	
Total federal non-refundable tax credits (line 35000)	3,344 40	Balance owing (line 48500)	0 00

Part C - Electronic filer identification (mandatory)

Using T1135 EFILE for T1 in ProFile

All Canadian resident taxpayers (including nonresident trusts deemed resident in Canada by section 94 of the Act) are required to file Form T1135, *Foreign Income Verification Statement*, if at any time in the year the total cost amount of all specified foreign property to the taxpayer was more than \$100,000 (CAD).

Note: The T1135 doesn't EFILE with a T1 or T2. It must undergo EFILE independently.

Finding the T1135:

Enter **T1135** into the forms search bar menu. Select **T1135 Foreign income verification statement** from the search results.

The initial question is in the **Filing** section of the T1 **Info** tab.

EFILE the T1135:

1. Ensure the related **Yes/No question** is answered affirmatively on the T1 **Info** tab.
2. Select the **EFILE the T1135...** option from the **EFILE** dropdown menu. A transmission window will display indicating that the T1135 is ready to transmit.
3. Select **OK**. The T1135 transmits to CRA, and a confirmation number is provided.

A screenshot of the EFILE transmission window. The window has a title bar that says 'Filing'. Below the title bar, there is a section titled 'EFILE this return?'. This section contains two radio buttons: 'Yes' (which is selected) and 'No'. Below the radio buttons, there is a question: 'Did the taxpayer electronically sign the T1135?'. This question has two radio buttons: 'Yes' (which is selected) and 'No'. Below the question, there is a paragraph of text: 'If multiple tax year returns are being filed in the same process year, the Canada Revenue Agency requires all prior year returns to be filed in chronological order. Please confirm the following question:'. To the right of this section, there is another section titled 'Are you a Canadian Citizen?'. This section contains two radio buttons: 'Yes' (which is selected) and 'No'. Below the radio buttons, there is a paragraph of text: 'As a Canadian citizen, do you authorize the Canada Revenue Agency to give your name, address, date of birth, and citizenship to Elections Canada to update the National Register of Electors or, if you are aged 14 to 17, to update the Register of Future Electors?'. This paragraph has two radio buttons: 'Yes' (which is selected) and 'No'.

Note: The confirmation number can also be viewed on the information tab of a T1 or T2 return, post-transmission.

Common questions regarding T1135 are found on the [CRA website](#).

Using CRA Data Import with AFR for T1 in ProFile

Auto-Fill My Return (AFR) is a secure CRA service. It allows authorized representatives to electronically request and receive certain tax information to fill in parts of their client's income tax and benefit return. ProFile offers the service for both single and multiple individual T1 returns.

Acquiring AFR permissions

The tax Preparer must have a valid authorization from the taxpayer to access the Represent a Client website. There are two ways to acquire this authorization:

- The taxpayer can access CRA's **My Account** service. Preparers request that the taxpayer enter the Rep ID to authorize the Preparer as an individual, a Group ID to authorize a group of representatives, or a business' Business Number (BN) to authorize all employees of a business
- Request the permission of the taxpayer via a **T1 Authorize a representative** submission as noted in the Authorizing or Cancelling a Representative section of this guide.

Note: To learn how to obtain Represent a Client access, review this [CRA article](#).

Importing data with AFR

1. Open or create a T1 return.
2. Select the **Import CRA data** option from the **File** dropdown menu. The **CRA Data Import Tool** window displays.
3. Select **Launch CRA Website**. The CRA's **Represent a Client** window launches in a separate browser window.
4. Sign in to the CRA site with your **Represent a Client** credentials. The **CRA Data Import** window lists the clients whose SINs can be entered into the CRA website.
5. Select the client and select **Next** to provide confirmation. The CRA system processes the request. The **Successfully Connected** message displays when the connection has been made between the ProFile and CRA systems.

The top screenshot shows the 'CRA Data Import' window with a progress bar at the top. The main heading is 'ProFile CRA Data Import' with the subtext 'Quick. Easy. Secure'. Below this is a list of benefits: 'Save time by automatically importing client information', 'Prevent manual data entry errors', 'Ensure client data is always accurate and up-to-date', and a link to 'Learn more on intuit.ca'. A small inset image shows the 'Represent a Client' website. A disclaimer at the bottom states: 'You are about to be redirected to a secure Canada Revenue Agency (CRA) service that allows authorized representatives to request the electronic delivery of available tax information to the software to complete portions of an individual's current and prior year tax return. To use this service you must have a CRA or Sign-In partner credential. To obtain online access for your client, complete an E-authorization web submission for Authorizing or Cancelling a Representative via the Represent a Client portal or through the CRA E-authorization.' The bottom screenshot shows the 'CRA Data Import' window with a progress bar. The main heading is 'Data Import Worksheet' with the subtext 'Review the imported data below'. There are links for 'Expand All' and 'Collapse All'. A table of imported data is shown with columns for 'Check/Uncheck All', 'T4 Statement', 'GOVERNMENT DOWNLOADED DATA', 'LINE ITEM', and 'ACTION'. The table contains three rows of data: 'T4 Statement' (1 item(s)), 'Tuition, Education, and Textbook Amounts and Canada Training Credit' (1 item(s)), and 'Registered Retirement Savings Plan - Contribution Information'. The 'T4 Statement' row shows a value of 175992.73 for line item 14. The 'Tuition, Education, and Textbook Amounts and Canada Training Credit' row shows a value of 1250 for CRA and 0 for ProFile. The 'Registered Retirement Savings Plan - Contribution Information' row is partially visible. At the bottom, there is a 'Select Client' dropdown menu, an 'Import Selected Data' button, and a 'Cancel' button.

6. ProFile's **Data Import Worksheet** window displays. The default display setting is the basic view. Select the **+** icon next to each statement to reveal the expanded view, which displays more details.
7. Review the data and forms to be imported. If correct, select **Import Selected Data**. Select **Close**.
8. To review the data imported, select the **Data Import** tab in ProFile's Auditor.

 **Tip:** If you have used AFR before and are using it again, make sure you uncheck items that have already been imported. This can cause duplicate imports that can add too much information. This reduces the need to delete duplicate slips.

Attaching Documents for EFILE of TP1 Returns with the Attach a Doc Feature

When are attachments transmitted?

Revenu Quebec (RQ) allows the transmission of supporting documentation via ProFile's Attach a Doc feature after an amended return has been sent but before a notice of assessment (NOA) has been returned by RQ.

What file types are supported?

The following file types can be transmitted as attachments:

- .pdf
- .jpg
- .jpeg
- .tiff
- .tif

What's the maximum attachment size?

The maximum attachment size is 20 megabytes (MB). This is an RQ limitation.

Is there a limit to the number of attachments transmitted?

Submissions are limited to 25 attachments each. This is an RQ limitation.

Review our [support article](#) on using the Attach a Doc feature for TP1.

Using Couple's Returns for T1 in ProFile

Creating a couple's return

1. Open or create the T1 return for the client.
2. On the **Info** form, select either **Married** or **Living common-law** for the marital status.
3. Select **Switch to spouse** . The **Couple Returns** window displays.
4. Choose whether to create a new return for the spouse or couple the file to an existing return.
 - Select **Create a new return for spouse** to open a new return for the spouse, or,
 - Select **Open an existing return** to browse to a file on your hard drive and select it

! Note: After combining the data, ProFile will ask if you want to delete the original file for the spouse. Remove the file to avoid having the same return in both files. This can cause problems.

5. Select the **Save** option from the **File** dropdown menu.

ProFile saves both spouses' tax returns in the same data file. This keeps the tax returns together as file operations are performed on the tax return file (for example, backing up to a disk).

6. Once returns are coupled, select **<F5>** on the keyboard to toggle between the returns.

Uncoupling a couple's return

1. Open the coupled return.
2. Select the **Uncouple** option from the **File** dropdown menu menu.
3. Confirm the desire to uncouple the returns. ProFile automatically prompts the option to save the spouse's return in a separate file.

4. Select **Save**. The client's file keeps the coupled file name (for example, **Couple, Joe** and **Thelma.T25**). It may be renamed by selecting the **Save As** option from the **File** dropdown menu.
5. On the **Info** form in each file, select **Widowed**, **Divorced**, **Separated**, or **Single** for the marital status.

Family Linking for T1 Returns

File management features make it easy to work with linked T1 or T1/TP1 files for members of the same family:

- Linking family returns
- Working with linked files
- Printing linked files
- Saving linked files
- Sharing income between spouses
- Sharing data between family members
- Estimating Child Tax Benefits
- Open and close family files

Working with linked family files

Once linked, family files can be opened and closed together.

If you prefer working with family files open together, open them all together when beginning to work on a set of family files. If files were closed together, (for example, **File** -> **Close family**) ProFile will open the returns together.

If you close the file for one family member at a time, all family files will open together when you open all files at once. This won't happen until the next time you open all files at once.

Switch between Family Members

Use the  toolbar icon, the **Form** menu, or the **Window** menu to switch between open files for members of a family.

Print Family Files

When selecting the **File** -> **Print** option for a linked file, the **Print Selection** dialogue box displays a tab for each family member whose file is currently open to allow printing returns for the whole family at once.

File Properties

View the **File Properties** details for all family files open together and listed in the **Window** menu.

Deactivate Family Files

To deactivate the family file-handling features, clear the checkbox **Allow family linking** under **Options** -> **Module > T1/TP1** -> **General** -> **Calculation options**.

Adding Dependants for T1 in ProFile

There's no limit to the number of dependants that can be added to the form. A new blank column displays when the last column provided is populated.

Completing the "Dependant information" form:

1. Enter the term **dependant** into the ProFile search field . Select the form from the search results (for example, **Dependant information**).
2. Enter the dependant information in full. If there is more than one dependant, complete information in each column.

Personal information entered on the Dependant form automatically populates for both spouses, regardless of which is chosen.

Selecting family linking:

1. Select the **Module...** option from the **Options** dropdown menu.
2. Ensure the **Allow family linking** option is checked in the **Allow family linking** section of the **General** tab.
3. Select **OK**.
4. Identify the dependant in the **Dependant information** form that to link.
5. Right-click in one of the dependant's form fields. Select the **Return for** option from the menu.
6. Select **Yes** when asked **Create a new return for?**

✓ The new return is created for the dependant.

Using a Medical Expense form for T1 in ProFile

Taxpayers may claim medical expenses for any 12-month period that ends in the current tax year. Expenses already claimed on last year's tax return can't be claimed again. Generally, all amounts paid can be claimed even if they weren't paid in Canada.

Opening the Medical Expense form:

1. Search using the term **medical** in the ProFile search bar,.
2. Select the **Medical expenses** form displayed in the search results.

Optimizing Medical Expenses for Coupled Returns

The Medical Expense form in ProFile automatically shares information between coupled returns.

1. To optimize medical expenses, select the **Yes** option to the **Optimize medical expenses?** question at the top of the form.

ProFile determines which taxpayer should claim the deduction at line 33099, according to the lowest net income (if the taxpayer can claim all expenses).

2. To decide independently which spouse should claim the deduction, select the **No** option to the **Optimize medical expenses?** question at the top of the form and select the **Yes** option to the **Are you claiming medical expenses?** question.
3. Select **Percentage** and enter it in the corresponding field for the current return to allocate a percentage to each spouse. The spouse's return will automatically reflect the remaining percentage.

Medical				Medical expenses		
Optimize medical expenses?				Yes ☐	No ☒

yyyy/mm/dd				No	0 00	0 00
Medical expenses subtotal						0 00

Using a Charitable Donations Form for T1 in ProFile

The ProFile Donations form is used to enter charitable donations for the taxpayer. Donations can be entered for both Canadian and U.S. organizations.

Search for the term **donations** in the ProFile search bar menu. Select the appropriate form (for example, **Charitable donations**).

Carrying forward donations

If a return is carried forward from a previous taxation year, ProFile copies the list of organizations into the **Charitable donations details** and **Donations to U.S. organizations** tables, but leaves amounts as **0**.

Any donation amounts can be entered to the same organizations for the current year in the appropriate rows.

1. When completed, delete the remaining organizations, right-click in each table and select the **Remove 'zero' lines** option.
2. If the taxpayer has donation amounts from slips (for example, T4 slips), enter those amounts on the related slip or slips (for example, **T4**, **T3**, **T2202A**, **T4A**, and **T5013**). ProFile automatically carries donation amounts from slips to the **Reported on slips** line in the **Donations** worksheet.

The donation carries forward and displays at the bottom of the **Charitable donations** form. ProFile automatically claims older donations first to ensure that the taxpayer uses them before they expire. Charitable donations for up to 5 years are eligible for carry forward.

! Tip: If you have multiple tax receipts from the same charity, use Tapes to add them up quickly and ensure accuracy.

Transferring donations to a spouse

1. Open the **donations form**.
2. Right-click on the form and select the option **Transfer all donations** or **Transfer current donation**.

✓ The donations transfer to the spouse.

Charitable donations details	
Name of organization	Amount paid
Charity	500.00
Reported on slips	0.00
Total current year donations	500.00

Donations to U.S. organizations

Using S3 Principal Residence Form in ProFile

Starting with the 2017-tax year, Preparers must complete forms T2091 or T1255 for each real estate property disposed of by taxpayers in the year, including their principal residence.

In case of multiple properties disposed of by the taxpayer in the year, complete forms T2091 and/or T1255 for each property.

How are the updated and new forms managed?

The Preparer completes the Schedule 3 form and S3 Principal Residence Details Form.

The Preparer completes the new T2091 and/or T1255 form and sends a copy to the client for their signature. Clients sign the new form and return it to the Preparer.

The T1255 and T2091 forms each contain some data that transmits to CRA.

Complete the TP274 form if the client is a resident of Quebec.

Can a Preparer enter data directly into the new T1255 or T2091 forms?

The new T1255 and T2091 forms have sections for property descriptions. This information comes from the information you enter on the S3 Principal Residence Details form. Enter any remaining required data on the new forms manually.

Is it necessary to retain the T1255 or T2091 forms?

A signed copy of Form T2091 - Designation of a Property as a Principal Residence by an Individual (or Form T1255 for deceased taxpayers) must be kept by the taxpayer in the case the CRA asks for it.

Undertaking the Workflow

1. Complete the individual T1 **Info** pages for the residence owner and spouse (if applicable).
2. Open the **Schedule 3** form.
3. Select an option under **Line 179**.

Note: The following steps should be undertaken only for one spouse's return if the property is owned 50/50 between spouses.

4. Select the **S3PrincipalResidenceDetail** link located above the section.

The **S3 Principal Residence Detail** form opens.

Note: Each property that is disposed of automatically links to a T2091 form. Each property disposed of by the designated legal representative of a deceased taxpayer automatically links to a T1255 form.

5. Complete the **S3 Principal Residence Detail** form as required. Note that the section **Designated by legal representative of deceased?** is automatically populated by the names of the residence owner and spouse (if applicable).

If the **Designated by legal representative of deceased?** option isn't selected, the **Description of property** section of the **T2091** form will populate.

If the **Designated by legal representative of deceased?** option is selected, the **Description of property** section of the **T1255** form populates.

If the spouse owns the house, the spouse who doesn't own it doesn't have to fill out a T2091 or T1255 form.

If the residence was owned in a 50/50 split, a T2091 or T1255 form must be completed for each spouse as follows:

- If option **1** in **Line 179 of Schedule 3** was selected, complete only the first page elements of the T2091 form that were not automatically calculated. If options **2** or **3** in **Line 179 of Schedule 3** were selected, it's necessary to complete the remaining elements of the form applicable to the specific situation, or:

S3PrincipalResidenceDetail

Principal Residence Detail

Principal residence designation

Beginning in 2017, Profile users will complete a **T2091 form** (or a **T1255 form** for a deceased client) for all disposals of a principal residence, whether or not a taxable capital gain resulted from the sale.

1. Enter the disposal information with the address, year of acquisition, and proceeds of the disposal in the S3PrincipalResidenceDetail worksheet below.
2. Check the corresponding box in Line 17900 based on the information entered in the worksheet.

Some information from the **S3PrincipalResidenceDetail** worksheet transfers to the **T2091** or **T1255 form**.

3. Review the summary information entered from the S3PrincipalResidenceDetail worksheet; this section is at the bottom of the Schedule 3 form. The summary information is for review purposes only and is not in the CRA's official Schedule 3 form.
4. Navigate to the **T2091** or **T1255 form** and complete the remainder of the form as necessary. It is not necessary to complete pages 2 and 3 of the form(s) if option "1" has been selected on Line 17900 of the S3PrincipalResidenceDetail worksheet.

Some information from the **T2091** or **T1255 form** transmits with the return through EFILE and is considered "filed" with the return. Do not send a paper copy to the CRA unless requested to do so.

17900 ☒ 1 I designate the property as my principal residence for all of the years that I owned it or for all of the years that I owned it except one year.

☐ 2 I designate the property as my principal residence for some but not all of the years that I owned it.

☐ 3 I designate the properties as my principal residences for some or all of the years that I owned them.

Note: In all cases you are required to complete **Form T2091(IND)**, Designation of a property as a principal residence by an individual, or **Form T1255**, Designation of a Property as a Principal Residence by the Legal Representative of a Deceased Individual, whichever applies.

Using Pension Split Optimization for T1 in ProFile

Canadian residents who received eligible pension income during the taxation year may be able to allocate up to half of their eligible income to their spouse (or common-law partner) for income tax purposes.

Completing T1032 form:

1. Open form **T032, Joint Election to Split Pension Income**.
2. Indicate at the top of form T1032 whether you are the **Pensioner** (transferring pension income to his/her spouse) or the **Pension Transferee** (receiving pension income from his/her spouse).
3. Enter the amount of the elected split pension on **Line 22** of the form. Based on your Pensioner/Pension Transferee selection, the amounts will automatically flow to lines 21000/11600 of each of the spouse's returns.

Utilizing the pension optimizer worksheet:

1. Open the form **T1032OPT, Optimize - Split-pension income**.
2. To view the amount that ProFile recommends that the taxpayer transfer to his/her spouse or common law partner, right-click on the worksheet and select the **Optimize split-pension income** option.

Utilizing scenarios in the Calculator section:

1. Open the form **T1032OPT, Optimize - Split-pension income**.
2. Enter the amount of pension income to be split in the **Elected split-pension amount** box under **Scenario # 1**.
3. Press **Enter**. The calculator displays the **Total Payable and Balance Owning** for everyone, as well as combined totals for the couple.

T1032Opt Optimize - Split-pension income

Information for the elected split-pension amount
The Split-Pension Income optimization worksheet helps you determine the amount, if any, to enter on line G of the T1032 - Joint Election to Split-Pension Income.
To view the amount that we suggest for transfer, right click on the worksheet and select **Optimize split-pension income**.
For additional information, press <F1> to access help for this worksheet.

Calculation of the elected split-pension amount

	Zero transfer	Suggested transfer	Calculator
			Scenario #1 Scenario #2
Elected split-pension amount	0.00	43,500.00	
Total payable (line 43500)			
Sarah	38,534.62	20,508.70	
John	111.88	11,080.42	
Combined	38,646.30	31,589.12	
Balance owing / refund			
Sarah	19,212.12	2,688.20	
John	0.18	9,468.92	
Combined	19,212.30	12,155.12	
Combined net benefit (cost)		7,057.18	

Summary of the elected split-pension amount
We have determined that transferring \$43,500.00 to John's return will result in the lowest combined total payable suggested amount, the balance owing of \$19,212.30 is decreased to \$12,155.12. This represents an overall savings of \$7,057.18.
Maximum split-pension amount (from line 13 of your T1032): \$43,500.00
Please enter the split-pension amount you wish to transfer to John. Elected split-pension amount: \$43,500.00
This amount will appear on line 22 on your T1032.

Impact of electing a split-pension amount on your combined total payable

Combined total payable (line 43500)

\$0 \$4,350 \$8,700 \$13,050 \$17,400 \$21,750 \$26,100 \$30,450 \$34,800

Handling Self-Employed Forms

Using Business Statements for T1 in ProFile

There are multiple business statements in ProFile, including:

- T2125 - Statement of Business or Professional Activities
- T776 - Statement of Real Estate Rentals
- T2042 - Statement of Farming Activities
- T2121 - Statement of Fishing Activities
- T1163 and T1273 - AgriStability

Each statement has their own set of forms, such as the asset, CCA, and summary forms.

Amounts from certain slips are transferable to a business statement. It gives the option to transfer on the slip.

These statements are multi-copy forms. To create a secondary statement, select the **New Form** option from the **Form** dropdown menu.

! Note: If you need multiple Business Statements or forms, help ensure you are on the form and select **Form > New Form**.

The new form will be represented with the #X beside the form name in your tabs based on the number of forms you create.

Deleting business statement sets (T4slip)

If you delete any form in a business statement set, ProFile deletes all the related forms in the same set. ProFile automatically selects to print any of the business statement forms that are used. Unused forms in a set have no impact on a tax return filing.

To clear a particular form in the set, open the form in the **Edit** window and select the **Clear Form** option from the **Form** dropdown menu.

This option doesn't impact other forms in the same set.

Review the **business statement** and **Asset details** entries in ProFile's **Help** feature for additional information.

Adding Motor Vehicles for T1 in ProFile

The Motor vehicle expenses (Business) worksheet lists motor vehicle expenses used for business purposes, related to the T2125, T2121, T2042 and Quebec business statements.

From the Allocation of expenses dropdown menu, select your business statement (if you have not yet opened a business statement, the drop down list will be empty).

Data entered on the Business Auto form flows to the selected business statement(s).

In the case of the T2125, T2121, and T2042 business statements, ProFile transfers automobile expenses to different areas on the statements depending on the taxpayer's percentage of ownership of the business:

- If the business is a sole proprietorship (% ownership = 100%), then the automobile expenses are transferred to the expense section of the business statement (line 9281 or 9819, depending on the business statement).
- If the business is a partnership, the expenses are transferred to line 9943, Other amounts deductible from your share of net partnership income (loss).

As you complete the Business Auto worksheet, ProFile automatically transfers the required information to the related Quebec business auto form (for example, **TP80Auto**, **TP1FishingAuto**).

Capital Cost Allowance (CCA)

Chart C of the Business Auto worksheet lets you calculate the Capital Cost Allowance (CCA). CCA amounts are transferred to the business statement's CCASummary or the CCA (assets owned by partner) table of the relevant business statement, depending on whether the vehicle is owned by the business. This is specified in the Owned by business? column of the Allocation of expenses table. For vehicles owned by a partner in a business, ensure that the **Owned by business?** column is set to **No** for the related business statement.

Sharing automobile expenses between spouses

ProFile doesn't automatically share the details of motor vehicle expenses with the spouse's return. If both spouses have expenses related to the business use of an automobile, they will each have to create their own Business Auto form.

Related Articles

Review our [support article](#) to learn more about CCA for motor vehicles.

Using a Motor Vehicle Expenses Form for T1 in ProFile

Form T777 calculates allowable employment expenses.

 **Note:** This applies to T7777 vehicles only.

Enter the term **T777** into the ProFile search bar menu and select the appropriate result.

There are four forms related to employment expenses:

- **T777:** Enter employment expenses.
- **T777Details:** Enter employment expenses for commission, and non-commission employees.
- **T777Other:** Enter expenses for musicians, forestry workers, and apprentice mechanics.
- **T777Auto:** Calculate automobile expenses related to earning employment income.

T777Auto#: Motor vehicle expenses:

This form calculates automobile expenses related to earning employment income.

1. Create a new **T777Auto worksheet** for each automobile.

Complete the expense details for the automobile. Any number of copies of the form may be created. Right-click on the form and select the **New Form** option from the menu.

Adding Assets and CCA for T1 in ProFile

Asset details forms are part of the business-statement set. For each business statement, ProFile creates a corresponding asset details and asset list form. For example, when creating a T2125#1 form, ProFile creates the corresponding forms T2125Asset#1 and T2125AssetList#1.

Use asset details and asset list forms to track business and rental assets. Enter asset information on the asset details form. ProFile automatically transfers this information to the corresponding asset list form. The asset list form displays all assets in a single table that you can print.

 **Note:** It isn't possible to print the asset list form.

Entering asset information:

1. Complete a separate entry for each asset.
2. A list of assets appears in the panel on the left of the **asset details** form. Select one of these items to display the asset details for a particular asset.
3. Select **New** to enter information in a blank column. ProFile automatically numbers each asset as entered on the information and creates a blank entry for the next asset. Complete a separate entry for each asset.
4. Enter details for each asset under the Federal/Quebec headings. ProFile automatically calculates the net cost or proceeds and transfers the amount to the **CCA form** to calculate the capital cost allowance (CCA), recapture, or terminal loss.

Capital Cost Allowance (CCA) form

Capital Cost Allowance (CCA) forms and summaries are part of the business statement set. For each business statement, ProFile creates a corresponding CCA and CCASummary form. For example, when creating a T2125#1, ProFile creates the corresponding forms T2125CCA#1 and T2125CCASummary#1.

Using the Employment Expenses form for T1 in ProFile

Use form T777 to calculate allowable employment expenses.

There are four forms related to employment expenses:

- T777
- T777Details
- T777Other
- T777Auto

Enter employment expenses for commission, and non-commission employees on T777Details.

Enter expenses for musicians, forestry workers, and apprentice mechanics on T777Other.

Use form T777Auto to calculate automobile expenses related to earning employment income.

T777Auto#: Motor vehicle expenses:

Use this form to calculate automobile expenses related to earning employment income.

1. Create a new T777Auto worksheet for each automobile.
2. Complete the expense details for the automobile.
3. Right-click on the form and select **New form** from the context-sensitive menu.

Using Comparative Summary for T1 in ProFile

ProFile provides summary forms that present the tax return data in different ways. These include:

- **Summary - Tax Summary (Federal):** This form displays all the non-zero line items of a single taxpayer's T1 return (each field that contains data in the return).
- **T1Summary - Tax Return Summary, TP1Summary - Tax Summary (Québec):** These forms display major items from the taxpayer's return
- **5Year - 5 Year Tax Summary (Federal), TP15Year - TP1 5 Year Tax summary (Québec):** This form displays the major items for a single taxpayer's last five years of tax returns.
- **Comparative - Comparative Tax Summary (Federal), TP1Comparative - TP1 Comparative tax summary:** This form compares the major items from this year's tax return to last year's tax return for a single taxpayer. If the return is carried forward using Profile, last year's amounts appear automatically on the comparative summary.
- **NRTC - Comparative NRTC Summary:** This form compares the non-refundable tax credits on the federal and provincial tax returns
- **T1Review - T1 Review, TP1Review (Québec):** Like the Comparative Tax Summary, this form compares the major items from this year's tax return to last year's tax return for a single taxpayer, with a special focus on review. The form uses the variance thresholds specified under **Options -> Module... -> T1/TP1 Review** to highlight significant changes between current and prior year returns. it's also possible to adjust the variance threshold in the Review preferences section of the form. ProFile calculates the differences and displays them on the T1/TP1 Review tab in dollar and/or percentage amounts.
- **Five-year comparative summaries** are part of the business-statement set. For each business statement, ProFile creates a corresponding five-year comparative summary form. For example, if creating a T2125#1 form, ProFile creates the T2125Comparative#1 form. This form is used to compare up to five years of business statement information.

ProFile automatically carries forward previous-year business statement information from the previous year to this form. Enter any additional information directly in the summary.

If creating a new return, rather than undertaking the carry forward of an existing return, enter the previous year information directly on the comparative summary. ProFile carries forward this information in the following year.

Using Tax Planner for T1 in ProFile

The tax planner in ProFile prepares a projection of the taxpayer's position for the **next taxation year**.

Tax Planner is an unlimited form, so as many different scenarios as required can be created for a single T1 file.

Creating a T1 tax plan

1. Enter the term **tax plan** in the ProFile search bar .
2. Select the **PLAN: Tax planner** option from the search results. The tax planner displays.
3. Right-click on a form field and select the **New form** option from the menu.
4. Enter a description for the situation in the **Description** field. This description displays in the **Form Explorer** to distinguish between the different scenarios created.

 **Note:** When creating a new plan, ProFile creates new T1 plans for the client and spouse, all in the same numbered set.

Transferring data from the current year's tax return

To save time when you start a new plan, copy the amounts from the current year's tax return to get started.

1. Open a completed T1 client file.
2. Open the tax planner from the **Client** category of the **Form Explorer**.
3. Right-click on a form field and select the **Copy T1 return** option from the menu. The return's data imports into the tax planner.
4. Change any amounts to reflect the client's new projections for the year.

Filing a T1 for a Deceased Taxpayer in ProFile

Complete a return for a deceased taxpayer who's single:

1. Create a new T1 return in ProFile.
2. Browse to the **Info** sheet.
3. Enter the date of the client's death in the **Date of Death** field under the **Taxpayer personal information** section.

The date of the client's death in the **Is this return for a deceased person?** section of the T1 sheet updates automatically.

! Note: If the deceased taxpayer is married, the status of the individual's spouse changes automatically to **Widowed** on the spouse's form.

Carrying forward a coupled deceased return

When carrying forward a coupled file in which a spouse files a deceased return for the previous taxation year, ProFile automatically carries forward only the return for the surviving taxpayer.

Taxpayer personal information		Marital status	
SIN	111 111 118	Indicate your marital status on December 31, 2024	
Title	Mr	1 ☒ Married	2 ☐ Living common-law 3 ☐ Widowed

Completing Special return for deceased taxpayer

1. Enter the date of the client's death in the **Date of Death** field under the **Taxpayer personal information** section.
2. Scroll down the **Info** sheet to the **Special return for the deceased taxpayer (Other than "final return")** section.
3. Review the options in the section and select one if applicable.

Completing a T1 Adjustment

ProFile can automatically calculate the T1-ADJ form, if an adjustment is required.

! Note: ProFile recommends using the ReFILE feature where possible: It's a faster, and easier-to-use experience when compared to undertaking a T1 adjustment. Use T1 adjustment where ReFILE isn't an option. Also, note that a T1ADJ form can't be electronically filed.

Using form T1ADJ:

1. Open a T1 file you made and filed before. To save the original tax return, choose Save As from the File dropdown menu and save the return with a changed name.
2. Select the option **Snapshot/variance** from the **Audit** dropdown menu. The **Snapshot/variance** window displays.
3. Select **New**, A new entry displays in the **Active** list.
4. Name the snapshot something that identifies why the return is being adjusted (for example, **Additional T3 slip**), and then select **OK**. This records amounts in key fields that ProFile will check for variance after the return adjusts.
5. Browse to the form or slip that requires adjustment and key in the new values.
6. Use the **Form Explorer** (or press **<F4>** or use the **Search** bar) to open a copy of the **T1ADJ**. ProFile allows unlimited copies of this form to be made, so additional adjustments to the return can be filed as necessary.
7. Right-click on the form and select the **New** option from the menu to create another copy.
8. Right-click on the **T1-ADJ** form and select the **Adjust from [snapshot name]** option with the name of the snapshot.
9. ProFile compares the original return to the revised data. The software automatically detects the impact on all relevant fields, and completes the table with line numbers, names and changed amounts. This only applies to fields with CRA line numbers.
10. There's a free-form area on the T1-ADJ where **Other details or explanations** are provided. To create separate paragraphs in this section, use **<Shift + Enter>** to start each new paragraph.
11. Print a copy of the T1-ADJ and mail it to the CRA. There's no need to submit a full return.

Mailing form T1-ADJ

The CRA keeps a list of all tax centers where T1-ADJs can be sent.

Review the [CRA list here](#).

Review our [support article](#) on adjusting a T1 for additional details.

Using ReFILE for T1 in ProFile

If you are an EFILE service provider, you can use ReFILE to send T1 adjustments online for tax years 2018-2024 for your clients. The ReFILE service allows you to change the same lines that individual taxpayers can with the Change my Return service in My Account.

Who can use ReFILE?

Preparers can use the ReFILE service under the following conditions:

- You have a file for tax years 2018-2024
- You have level 2 authorization from your client
- The initial return was filed online via EFILE
- The initial return was assessed
- You have acquired a new sign-off for a revised T183 from client

The screenshot shows the ProFile software interface. At the top, there is a navigation bar with tabs labeled '1. T1', '2. Info', '3. T4', '4. T2125#', '5. T1ReFILE', and a '+' icon. The '5. T1ReFILE' tab is highlighted with a red border. Below the navigation bar, the main content area has a light pink background and is titled 'T1 ReFILE Request' in bold red text. Under the title, there are two bullet points: 'Use this worksheet to amend your 2022 personal tax return' and 'ReFILE transmission requests cannot be used to change the following fields:'. Below these bullet points, there is a list of fields that cannot be changed: '- Address', '- Name', and '- Social insurance number'.

What tax years does ReFILE support?

ReFILE is supported for 2018-2024-tax years with the latest ProFile version.

Undertaking the ReFILE process

1. Open a T1 return that has already undergone EFILE and for which a CRA assessment has been received.
2. Save the return as a new file, using the **Save As...** option from the **File** dropdown menu.
3. Enter the new information that requires a ReFILE into the return. For example, a client has received an unexpected T4 indicating additional income.
4. Open a **T1ReFILE** form.
5. Ensure the client information (SIN, Name) is correct and enter the current date in the **Date of ReFILE** field.
6. Select the **Yes** option in the **Is this an amended tax return?** field.
7. Reprint and get the client to sign off on a new T183.
8. Select the **EFILE/ReFILE this return** option from the **EFILE** dropdown menu.

✓ You will get a new confirmation number on the return's **Info** page.

Using Pre-Authorized Debit (PAD) for T1 in ProFile

Pre-Authorized Debit (PAD) is a CRA feature that allows tax professionals to submit a payment to CRA for taxpayer clients who have an amount due on their current-year T1 Personal returns. This feature saves the taxpayer time over printing a T7DR(A) form and making the payment in-person at their Bank.

Note: Complete a PAD and EFILE it for each taxpayer. If there's a spouse with balance owing, the spouse requires his or her own PAD form to be completed and undergo EFILE.

Completing the PAD Form:

1. Complete the taxpayer's T1 Personal return in ProFile and EFILE.
2. Select the **Form Explorer** option from the ProFile **GoTo** menu.
3. Search for **T1PAD** and open the **PAD form**.

Note: If the taxpayer has completed the T1DD form, you can retrieve their banking information from the T1DD to automatically populate the PAD form.

4. Change the **Do you wish to set up Pre-Authorized Debits (PAD) for current year tax owing** value from **No** to **Yes**.
5. Enter the amount to be paid into the **Total amount you would like to pay through PAD (single one-time payment)** field.
6. For payment in full, check the **Pay in full** checkbox. For partial payment, enter the amount in the value field.
7. If not using the same information as the Direct Deposit Request, enter details of the bank and account the payment is being made from.
8. Enter a payment date. The date must be between five business days (not including holidays) and one year in advance of the current date.

☒ The PAD form is completed.

The screenshot shows the 'Pre-Authorized Debits (PAD)' form. At the top, there are tabs for '1. T1', '4. T1PAD', '2. Info', '3. T4', and a '+' icon. The main heading is 'Pre-Authorized Debits (PAD)'. Below this, a question asks 'Do you wish to set up Pre-Authorized Debits (PAD) for current year tax owing?' with a 'Yes' button highlighted by a red box. Under 'Instructions', it states that PAD is a secure, online, self-service payment option and that only Payment on Filing (POF) for the current tax year will be allowed to create a PAD agreement. It also instructs to go to the Efile Menu and select 'Efile Pre-Authorized Debit for this TaxPayer'. Below the instructions are fields for 'First name', 'Last name', and 'Social insurance number'. At the bottom, there are two fields: 'Total amount owing' with a value of '1,972.65' and 'Total amount you would like to pay through PAD (single one time payment) (See notes)'. The 'Pay in full' checkbox is checked and highlighted by a red box, and the value field next to it shows '0.00'. A red box also highlights the 'Pay in full' checkbox and the '0.00' value field. Below these fields, it says 'Complete the banking information area below'.

EFILE the PAD Form from the T1

1. Return to the taxpayer's T1 form that underwent EFILE.
2. Select the **EFILE Pre-authorized Debit for this taxpayer...** option from the **EFILE** dropdown menu.

The PAD form is sent to EFILE. The Preparer gets a confirmation number. This number is used to fill out the PAD form (field T1PAD confirmation number) and on the information page after the EFILE.

Additional information

Read the [CRA guide on PAD](#) for more information.

Review our [support article](#) on PAD for ProFile customers.

Managing T2 Returns in ProFile

Overview of T2 Module in ProFile

A T2 is the federal tax return for incorporated businesses (also called corporations). An incorporated business must complete a T2 return each year, even if there is no tax payable.

The form must be filed within six months of the end of each corporation's fiscal year.

The CRA requires that any T2 returns being filed electronically must be filed via the EFILE service.

Required information and material for T2 returns

For the best-possible experience, assemble the following information and materials prior to undertaking the T2 return:

- Prior-year financial statements and T2 return, if applicable
- Articles of incorporation
- List of product and services provided in percentages
- Obtain backup electronic copies of applicable bookkeeping (for example, QuickBooks, Simply accounting, MS Excel, etc.), trial balance, balance sheet, income statement, general ledger, credit card and bank statements of the last month of the corporation year
- Corporate installment payments made during the year
- Copy of prior years' Notice of Assessment (NOA)
- Correspondence with any government relating to the corporation
- List of changes to the corporation from last year (for example, new director, shareholders, new assets, etc.)
- Business number of the corporation (review the incorporation documents or prior-year return)
- Address of corporation, including head office, mailing, and location of books, if applicable (you can review the CRA My Account feature for this information)
- Fiscal year-end date of company
- Enter information and carry-forward the return in ProFile of the prior-year corporation return, if available
- Provide a signed business consent form to obtain access to the client's business information through the CRA ([support article](#))

T2 Guide and In-Product Tutorial in ProFile

ProFile provides customers a T2 guide that includes a list of steps a user should understand to file a corporate return.

! Note: The T2 guide covers basic steps for filing a T2 return but doesn't provide any tax-related advice or opinion. If you aren't a designated accountant, ProFile suggests looking at the CRA website, calling the CRA tax help line, or speaking with a CPA firm that is approved to help you with current tax laws. ProFile also recommends having any return prepared or reviewed by a professional accountant before filing.

Review our T2 [support article](#).

ProFile has a T2 tutorial that shows how to fill out and file a corporate return.

To access the tutorial:

1. Open a T2 return.
2. Select the **1. Getting Started** option under the **Training > T2** dropdown menu.

The T2 tutorial opens.

3. Select **Next** to proceed through the tutorial.

Submitting and Canceling Business Consent

Prior to ProFile release 2019.3.0, Preparers used forms RC59 and RC59X to submit and cancel a Business Consent with CRA. Forms RC59 and RC59X were updated in ProFile release 2019.3.0 to let electronic approval of two services: permission to access client information via online, phone, and mail methods, and the cancellation of existing client access.

Review our [support article](#) on the new process for submitting and canceling a Business Consent.

EFILE form MR-69 in ProFile for T2

The MR-69 form is the **Authorization to Communicate Information or Power of Attorney** form in ProFile.

ProFile users can upload a signed copy of the MR-69 for RQ to retain in their records using ProFile version 2019.3.0 or later.

Review our [support article](#) on the process for T1 and T2.

Using Form T1044 in T2 module

Form T1044 Non-Profit Organization (NPO) Information Return is for non-profit organizations as described in paragraph 149(1)(l) of the Income Tax Act, and organization described in paragraph 149(1)(e) of the *Act*.

Search in ProFile for **T1044** to find the form.

Using T1134 EFILE for T2 in ProFile

ProFile users can electronically file the T1134 - Information Return Relating to Controlled and Not-Controlled Foreign Affiliates for your client in the T2 module.

The T1134 return can undergo EFILE before or after filing the T2 return.

EFILE the T1134 Return:

1. Open the T1134 return undergoing EFILE.
2. Select the **EFILE the T1134** option from the **EFILE** dropdown menu.
3. Select **OK** when presented with a request for confirmation.

 **Note:** Select the **Don't show this warning again** option to avoid seeing the confirmation message in subsequent EFILE efforts.

4. Clear any audit messages before transmitting the form.

If the return transmits successfully, ProFile displays a confirmation number. Retain this number for your records.

If the return transmission is unsuccessful, ProFile displays errors identified by the CRA. Correct any errors and resubmit the return.

Amending a T1134 Return for a Supplementary Deletion:

 **Note:** An amended return is only filed electronically if the original return was filed electronically. ProFile customers can electronically change a T1134 return that underwent EFILE and needs to be deleted.

1. Open the **TT1134SUPP** form to delete.
2. Select the **Delete Form** option from the **Form** dropdown menu.
3. Select the reason for deleting the Supplementary from the dropdown menu:
 - Duplicate
 - Filed in error
 - Other

The **TT1134SUPP** form is marked as **Deleted** for transmission to the CRA.

Importing GIFIs into ProFile

Using GIFI Import from Caseware for T2 in ProFile

The General Index of Financial Information (GIFI) is a comprehensive list of financial statement items where each item has a unique code. It allows a corporation to report its unique combination of accounts to the CRA.

Importing GIFI from CaseWare to ProFile

In Caseware:

1. Open Caseware.
2. Open the **Working Papers** client file from which to export.
3. Select the **GIFI** option from the **Export** menu, the **Export of Data to GIFI** dialogue box displays. Complete the fields in the dialogue box.
4. Select **OK**. The export process creates the GIFI file.

In ProFile:

1. Open a T2 return.
2. Select the **Import...** option from the **File** dropdown menu.
3. Select the location where the Caseware-created GIFI file is stored.
4. Select the GIFI file (*.gfi). Select **Open**. The **Import Successful** dialogue box displays **X**.
5. Select **OK**.

The GIFI information imports to the T2 return in S100 and/or S125 depending on the mapping used.

Using GIFI Import from QuickBooks Desktop for T2 in ProFile

! Note: It's necessary to undertake QuickBooks integration prior to importing GIFI from QuickBooks Desktop. This guide includes a QuickBooks Integration section.

About GIFI Import

The General Index of Financial Information (GIFI) is a comprehensive list of financial statement items where each item has a unique code. It lets a corporation report its unique combination of accounts to the CRA.

Importing GIFI from QuickBooks desktop:

1. Open a T2 return in ProFile.
2. Ensure that the ProFile T2 taxation year matches the corresponding year entered in QuickBooks.
3. Select the **Yes** option for the question **Complete return from GIFI?** in the **Filing** section of the ProFile T2 return.
4. Select the **QuickBooks Desktop Import...** option from the **File** dropdown menu.
5. Set the **Year start** and **Year end** values in the **GIFI Data Import** window.
6. Select **Continue**.
7. Review the amounts being imported from QuickBooks to ProFile.
8. If correct, select **Import**.

The 'GIFI Data Import' dialog box is shown. It has a title bar with a close button. The main area is titled 'Enter fiscal year start and end'. It contains two date pickers: 'Year start' with the value '2025/01/01' and 'Year end' with the value '2025/12/31'. Below these is a checkbox labeled 'Use fiscal year dates from T2 Info form' which is checked. At the bottom right are 'Continue' and 'Cancel' buttons.

The 'Trial Balance Import Preview' window for 'Akhron Enterprise' is shown. It displays the company file path, the date 'Thu Jun 4 14:46:12 EDT 2015', and the title 'Trial Balance As of 2015-06-03'. Below this is a table with columns: 'Account Number/Name', 'GIFI Code*', 'Debit', and 'Credit'.

Account Number/Name	GIFI Code*	Debit	Credit
Accounts Receivable		911300.00	
Driver Advances	1071	25000.00	
Accounts Payable			100938.14
GST/HST Payable		11112.35	
PST Payable (ON)			800.00
Fuel Surcharge	8000		10000.00
Uncategorized Income			900000.00
Professional Fees	8860	45078.00	
Reconciliation Discrepancies			25000.00
Utilities	9220	44247.79	
Total		1036738.14	1036738.14

At the bottom of the window are 'Done', 'Cancel', and 'Import' buttons.

Using GIFI Import from QBOA for T2 in ProFile

The General Index of Financial Information (GIFI) is a comprehensive list of financial statement items where each item has a unique code. It lets a corporation report its unique combination of accounts to the CRA.

Note: Only tax year 2015 and forward are supported.

Exporting GIFI from QBOA

1. Log in to the QBOA Firm containing the data to export.
2. Access the client's QuickBooks Online (QBO) subscription from the **Go to QuickBooks** menu or by selecting the **QB symbol** to the left of the company name. If you're not logged into the client file, [login here](#).
3. In QuickBooks Browse to the **Books to Tax** option on the left navigation pane and select **Workpapers** from the sub-menu.
4. Review the Trial Balance in the **Review and Adjust** tab.

5. Create **Groups** & move Chart of Account General Ledgers (GLs) into those groups to prepare for GIFI mapping. The total of the GL accounts in each group will appear on the line that is mapped on the S100 or S125.
6. Review the **GIFI Mapping** from the **Income Tax** section beside Workpapers to ensure that all the work is completed. If there are any unassigned codes, these can be mapped under the **Income Tax** section. To assign GIFI Codes, look at the list and choose Assign GIFI Codes. Use the pencil icon to change existing mappings at the GL level. Save the changes after each change.

7. Select **Books to Tax Actions**.
8. Select **Export GIFI file**.
9. Select the destination on your computer where you would like to save the GIFI (*.gfi) file.

The screenshot shows the QuickBooks Accountant interface. On the left, the 'Books to Tax' menu is open, and the 'Workpapers' sub-menu is selected. The main area displays the 'Books to Tax' page with tabs for 'Books review', 'Workpapers', and 'Income tax'. The 'Income tax' tab is active, showing a table of unassigned accounts. The table has columns for 'ACCOUNT BALANCE' and 'ACTION'. The 'ACTION' column contains 'Assign tax line' links. A red box highlights the 'Assign tax line' link for the '15100 Computer Hardware' account.

ACCOUNT BALANCE	ACTION
15100 Furniture and Equipment \$20,000.00	Assign tax line
15100 Computer Hardware \$5,000.00	Assign tax line
GST/HST Payable \$41,393.54	Assign tax line

TAX LINE	ACCOUNTS	AMOUNT
1002 Deposits in Canadian banks and institutions - Canadian currency	10200 RBC - Chequing - x3187	20,763.19
	10400 TD - Chequing - x4752	5,650.00
	10500 CIBC - Chequing - x1299	22,600.00
	TOTAL	49,013.19
1060 Accounts receivable	Accounts Receivable (A/R)	364,962.00
2009 Total accumulated amortization of tangible capital assets	15001 Accum. Depr. Furniture & Equip	-2,000.00

Importing GIFI into ProFile

1. Select the **QBOA Import...** option from the **File** dropdown menu.
2. Browse to the GIFI file to import.
3. Select the GIFI file and select **OK**.

The GIFI information imports in S100 and/or S125 depending on the mapping used.

 The process is complete.

Using CRA Data Import with AFR for T2 in ProFile

Auto-Fill My Return (AFR) is a secure CRA service. It allows authorized representatives to electronically request and receive certain tax information to fill in parts of their client's corporate income tax return.

Acquiring AFR permissions

The tax Preparer must have a valid authorization from the taxpayer to access the Represent a Client website. There are two ways to acquire this authorization:

- The taxpayer can access CRA's **Business Account** service. Preparers request that the taxpayer enter the Rep ID to authorize the Preparer as an individual, a Group ID to authorize a group of representatives, or a business' Business Number (BN) to authorize all employees of a business
- Request the permission of the taxpayer via a **Business Consent** submission as noted in the Business Consent section of this guide.

Note: To learn how to obtain Represent a Client access, review this [CRA article](#).

Importing data with AFR

1. Open or create a T2 return.
2. Select the **Auto-fill My Return (AFR)** option from the **File** dropdown menu. The **CRA Data Import Tool** window displays.
3. The **CRA login** window will open in a new window and the instructions will display.
4. Make sure the CRA data request information is correct and select **Next**. The CRA system processes the request. The **Successfully Connected** message displays when the connection has been made between the ProFile and CRA systems.
5. Return to the ProFile window, where a list of available client data options displays.
6. Select **Next**. ProFile shows **Downloading CRA client data**, then **Data download completed**
7. Select **Continue**.

The image shows two screenshots of the CRA Data Import tool interface. The top screenshot is the 'CRA Data Import' window, which has a progress bar at the top with five steps: 'CRA Data Import' (active), 'Enter business number', 'CRA login', 'Select data to download', and 'Download complete'. The main content area lists benefits: 'increases accuracy of client data', 'delivers most up-to-date client tax data', and a link to 'learn more online'. Below this is a redacted area with instructions about CRA's secure service and requirements for using it. The bottom screenshot shows the 'Select client data to download' window. It has the same progress bar, with 'CRA login' now active. The main content area explains that checked options will be downloaded into ProFile. It features four sections, each with a checked checkbox and a dropdown menu for the tax year: 'Prior year return data' (2018-05-15 23:59), 'Notice of (re)assessment' (2016-12-31), 'Return balances' (RDTOH, GRIP, Non-Capital/Capital Losses, CDA), and 'Corporation account balance'.

CRA Data Import

CRA Data Import Enter business number CRA login Select data to download Download complete

CRA Data Import

- increases accuracy of client data
- delivers most up-to-date client tax data
- [learn more online](#)

You are about to be redirected to a secure Canada Revenue Agency (CRA) electronic service for Corporations which will automatically allow the delivery of available corporate tax data.

To use this secure service you must have a CRA or Sign-in partner credential and be signed up and registered with either CRA's My Business Account or Represent a Client.

Each individual should enter their own userid and password to use T2 Auto-fill. Authorized Reps can also use T2 Auto-fill on behalf of a client, to do so you must have:

- a RepID with the [Represent a Client](#) portal.
- a valid RCS9 for online access on file

For more information on authorizing a representative, go to [Authorize or cancel a representative](#).

CRA Data Import

CRA Data Import Enter business number CRA login Select data to download Download complete

Select client data to download

The options below indicate the client data available from CRA. Checked options will download into ProFile. If left unchecked, the option's previously downloaded data is erased in the form.

☒ Prior year return data Select a prior year's full return to import	2018-05-15 23:59
☒ Notice of (re)assessment Tax year end associated with the NOA	2016-12-31
☒ Return balances RDTOH, GRIP, Non-Capital/Capital Losses, CDA	
☒ Corporation account balance	

8. ProFile's **Data Import Worksheet** window displays..
9. Review the data. Select **Transfer Selected** to transfer data to applicable forms.
10. To review the data imported, select the **Data Import** tab in ProFile's Auditor.

Tip: If you have used AFR before and are using it again, make sure you uncheck items that have already been imported. This can cause duplicate imports that can add too much information. This reduces the need to delete duplicate information.

For more detailed instructions on AFR, please review our [support article](#).

PROFILE (70 - HeadCopy (20231011) - Summary of data import)

ProFile CRA Data Import

Listed below is the CRA client data selected for import into ProFile.

There are five sections of downloaded data: Return data, Notice of (re)assessment, Return balances, Account balances, Corporation details.

Review each section of downloaded data for accuracy. The designation of "for review purposes only" applies to some sections: this data does not import into the return.

Discrepancies between existing and newly-downloaded data are highlighted in red.

Only checked options import to the return. Click **Transfer Selected** after all selections have been made.

Data download summary

Here is the overview of all imported data from CRA.

Attaching Documents for EFILE of T2 Returns with the Attach a Doc Feature

CRA allows corporations to transmit supporting documentation via ProFile's Attach a Doc feature within 24 hours of the EFILE of a T2's initial or amended return.

The following file types can be used as attachments:

- .pdf
- .doc
- .docx
- .xls
- .xlsx
- .rtf
- .txt
- .jpg
- .jpeg
- .tiff
- .tif
- .xps

What's the maximum attachment size?

The maximum attachment size is 150 megabytes (MB). This is a CRA limitation.

Is there a limit to the number of attachments transmitted?

If the attachments are sent within 24 hours of the T2 return, there's no limit to how many attachments can be sent.

Can I make attachments prior to the T2 return being transmitted?

Yes, but the T2 return must be transmitted first before the attachments.

Related Articles

Review our [support article](#) on using the Attach a Doc feature for T2.

Corporate Linking for T2

T2 filers can now link data from a related or associated corporation into the RAC Details form of another corporation using ProFile's Corporate Linking function.

Any changes to the data of a related/associated corporation found within a RAC Details form highlights and can synchronize easily.

Who can use Corporate Linking?

Any ProFile customer who has the T2 module is eligible to use Corporate Linking.

For which tax years is Corporate Linking applicable?

Corporate linking is available for T2 returns in the 2015-2018 module or later.

Will Corporate Linking work for OnePay and Trial licenses?

Yes.

Linking a Related or Associated Corporation to a T2 Return

1. Open the T2 return.
2. Select the Link  icon to link a related/associated corporation.
3. Browse to the folder containing the return being linked.
4. Select the T2 return file of the related/associated corporation being linked.

The details of the related/associated corporation display.

5. Select or unselect the related/associated corporation's data.
6. Select **Confirm**.

All selected related/associated data is imported and linked.

DESCRIPTION	CURRENT SYNC VALUES	SOURCE VALUES

The RAC Details of the newly linked corporation displays, and the designation **Linked** is assigned for it in the left-side display menu.

Reviewing Related/Associated Corporation Status

The status of related/associated corporations that are linked—or have been linked previously – to a corporation is displayed in the left-side menu of the linking window.

The following designations can apply to related/associated corporations:

Linked: The related/associated corporation is linked.

Manual: The related/associated corporation isn't linked, but the RAC Details information exists and may be linked.

Broken: The related/associated corporation was previously linked but has since been renamed or moved from its former location (for example, the original file folder or directory). To relink the related/associated corporation, locate the file and select Confirm or revert to the original file name.

Corporati...	Status
New Co Inc.	Linked
<Unknow...	Manual

Related and Associated Corporations Details

Special Election and Return Filing (SERs)

You can file Special Elections and Returns (SERs) online. You can also bring supporting documents when you file them. SERs can be filed at any time.

Supported special election returns

T2 Module, business returns

For business returns, you can use your EFILE number or DAC. All returns support document upload.

- S89
- T2054

FX module business account

For business returns, you can use your EFILE number or DAC. Returns that support documents upload:

- T2054
- T2058
- T2057
- T2059
- UHT2900 (This form doesn't support document attachments)

Frequently Asked Questions

Can I file the information return and attachments at the same time?

Yes, you can file with the return or after the return is filed. You must file attachments within 24 hours of filing the return. Outside of this timeframe, attachments must be submitted through the CRA website within 7 days.

What filing methods can be used to file SERs returns and attachments?

You can use an EFILE number, a DAC for business returns, or request a DAC to use in ProFile. If you're filing for the first time, contact the CRA help desk for a DAC, since it's not available through ProFile.

Can I use DAC to file my individual forms?

No. You need an EFILE number to file any individual forms/documents.

When should I use a DAC versus a Web Access Code (WAC)?

A WAC is requested from the CRA through ProFile for NetFiling T2 returns. DAC can be requested from the CRA using ProFile, for Business SERs designated forms (S89, T2054, T2058, T2057, T2059, UHT2900).

! Note: You'll need your business's latest Notice of Assessment (NOA) or Reassessment (NOR). If you're filing for the first time, contact the [CRA help desk](#) for a WAC or DAC, as it's not available through ProFile.

How long does it take to get a DAC through ProFile from CRA?

If you are eligible, the CRA will issue you a DAC right away, but has changed the process for security reasons. Please review this article for updates to the process of requesting a DAC

Where are my auditor tabs?

The auditor window will resize according to your screen size and resolution. To view all auditor tabs, click on the arrows on the right side of the auditor window.

Learn more about SERs in ProFile in our [support article](#).

Using the T2 Print Interface Experience

The T2 print interface uses dynamic menus. This means that only when you select a function (print, email, archive) will the related menu options display in the print interface. This helps keep the print interface clean and simple, as you see only the options for the function activated.

Using the new print interface is currently an optional experience. Preparers can still find the previous print interface in ProFile.

Select the **Print Setup** option from the **File** dropdown menu.

Unselect **Enable new T2 print menu** option box, and then select **OK**, the old print interface menu displays.

Accessing the T2 print interface:

1. Ensure you are using the latest ProFile release.
2. Open the existing T2 return.
3. Select the **Print Setup** option from the **File** dropdown menu , the **Print Setup** menu displays.
4. Select the **Enable new T2 print menu** option box and select **OK**.
5. When you select **File > Print** or **<Ctrl+P>**, the new print interface menu displays.

Using the Job Selection section

This feature is available in 2017 modules and later. When you go to print a return, the Job Selection feature pops up. The Job Selection section lets Preparers to Browse between types of returns and assign parameters for print, email, archiving, and language. The Job Selection dropdown menu populates automatically with print details based on the open T2 return.

Preparers can select a single return type to print, archive, or email from the dropdown list (for example, **T2 Paper**).

Alternatively, Preparers can select multiple types of returns to print or email from the dropdown list (for example, **T2 Paper** and **AT11**). If you select multiple types of returns, a tab for each type will appear below the Job Selection.

The details of the selected items display.

The details presented include email, archive, and print options for each item in the return, as well as language preferences and assigned printers.

Using the Archive PDF section

Preparers can set the file location and file name for archived forms in the new printer interface.

1. Select the **Archive** option under the job selection to access the **Archive PDF Options** menu in the new print interface.
2. Preparers can select two options for archived PDF locations:
 - Select the **Same folder as client file** option. This places the PDF in the same folder as the existing client file, or:
 - Select the **Specify a folder** option. Select **Browse** to choose a folder for the archived PDF file.

Note: The default archive locations pre-populate from the **PDF** tab in the **Environment Options** window.

3. Select **Continue** to save the selections.

Preparers can select two options for archived PDF file names:

- Select the **Same as ProFile tax file name** option. This names the archived PDF with the same file name as the tax file, or:
- Select the **Use Custom** option. Use **+** and **-** to assign file name parameters such as name, month, day, time, year end, and more:

Select **Continue** to save the selections.

Using the Email Options section

Preparers can set parameters in the Email Options section for email templates and email addresses.

1. Select the **Email** option under the job selection to access the **Email Options** menu in the new print interface.

The screenshot shows the 'Print or Email' window with the 'Job Selection' tab active. The 'Multiple Print Jobs Selected' section shows a table with columns: Email, Print, Archive, Return Copy, Language, Printer, and Forms. The 'Archive' column is highlighted with a red box. Below the table, the 'Email Options' section is highlighted with a red box, showing 'Email Template' set to 'None' and 'Email Address' empty. The 'Archive PDF Options' section is also highlighted with a red box, showing 'File Location' set to 'Same folder as client file' and 'File Name' set to 'Same as ProFile tax file name'. The 'Additional Information' section at the bottom shows 'PDF Password' set to 'User Specified' and 'Client status after printing' set to 'Unchanged'.

2. Select the available email template from the dropdown menu.

 **Note:** Email templates source from the designated ProFile **Templates** folder.

3. The client's email address—as set on the return—automatically populates in the **Email Address** field. If no client email address is set on the form, enter the address manually.
4. Select **Continue** to retain email settings.

The Preparer's email program opens a new draft email with the template and client email already entered.

Review our [support article](#) for additional details.

Using EFILE with Web Access Code (WAC) for T2 in ProFile

A Web Access Code (WAC) is a secure, personal code given to you by the CRA to prove your identity. The CRA gives this code to tax Preparers to file certain business returns and information slips electronically. Using a WAC helps ensure that the filer's identity is authenticated, adding an extra layer of security to the filing process.

For more information on Digital Access Codes (DAC), check out our article.

The CRA now needs your business' information from the most recent Notice of Assessment (NOA) or Reassessment (NOR) to request a WAC.

Note: If this is your first time filing and you're requesting a WAC, contact the [CRA help desk](#) to get one.

Applying for a WAC:

1. Select the **Transmit this return...** option from the **EFILE** dropdown menu.
2. ProFile reviews the T2 return for any outstanding warning. If there are no auditor warnings, ProFile displays a green checkmark.
3. Select **OK**.

The **Corporation Internet Filing** window displays.

Select the Authorization method

- **File return with EFILE Number and Password:** This allows EFILE users to use their existing credentials.
 - **File return with Web Access Code (WAC):** This option will expand the window to either use a WAC Code issued to you or request one on if you do not have EFILE credentials.
4. If requesting a WAC, enter the date of the most recent NOA/NOR and complete correct information in one of the three fields from that NOA/NOR before selecting **Request**.
 5. Select **Next** to transmit the return.

The screenshot shows the 'Corporation Internet Filing' window. At the top, it says 'Please select your Authorization method:'. There are two radio buttons: 'File return with EFILE Number and Password' and 'File return with Web Access Code (WAC)'. The second option is selected and highlighted with a red box. Below this is a 'Web Access Code' field and a link to 'Save a copy of the WAC for your records.' Below that is a 'Request a WAC' section with a 'Request' button highlighted in red. The 'Business Information' section contains fields for Business Number, Tax year-end date, Postal code of mailing address, Last name of contact person, First name of contact person, Title/Position of contact person, and Date of incorporation/amalgamation. At the bottom, there is a 'Notice of Assessment (NOA) or Reassessment (NOR) Verification' section, which is highlighted with a red box. It contains instructions to enter information from the most recent NOA/NOR, a field for 'NOA/NOR Issue date *' with the value '2024/10/31', and three fields for 'Part 1 tax', 'Total federal tax', and 'Net balance'.

 **Note:** If you aren't ready to transmit the return at this time, the WAC code will remain in this field until the return is transmitted. Remember to save a copy of the WAC for your records. You may need it later.

Using Amendments for T2 in ProFile

T2 amendments are carried out when a new piece of information demands that the original T2 be amended to reflect the new data.

Saving the original T2 return:

ProFile strongly recommends that the file be renamed before changing the return. This ensures the original T2 isn't lost in the process of being changed.

1. Open the T2 return that requires amendment.
2. Select the **Save As...** option from the **File** dropdown menu.
3. Save the T2 return as **[Your Corp Name]_amended**.

Amending the corporate information page:

1. Select the **Info** tab in the T2 return.
2. Set the following values in the **Filing** section:
 - **Is this an amended return?** Is set to **Yes**
 - **Internet file this return?** Is set to **Yes**
3. Select the **Yes** value on **line 997** of the **T2 Adjustment** worksheet.
4. Enter a description of the amendment in the field at **line 996**.

Restrictions

The following fields can't be changed under this process. ProFile displays a warning message if an amendment is submitted regarding one of these fields. These fields must be changed via the CRAs login services:

- Head office address change
- Mailing address change
- Location of books and records change

Managing T3 Returns in ProFile

Overview of T3 Module in ProFile

About T3 tax forms

A T3 Statement of Trust Income Allocations and Designations shows investment income from mutual funds in non-registered accounts and from certain trusts. In Québec, the form is a relevé 16 (RL16). The income may come from individual investments or from an estate trust as inheritance tax.

Amounts present in box 51 and/or 39 show a dividend tax credit available.

T3 slips show income from interest, dividends, and capital gains. All these types of income are taxed at different rates.

Receiving the T3 tax slip

Usually, T3 tax slips are received around March 31.

Key Forms for T3 in ProFile

There are some key T3 forms to be mindful of when completing a trust return:

Beneficiary form

Use the Beneficiary details form to enter information for trust beneficiaries. Amounts flow from the Beneficiary details form to the corresponding T3, NR4, and RL16 slips. ProFile also uses the Beneficiary details form to complete Schedule 9 in the trust return.

Allocation worksheet

Use the Allocation worksheet to show how the trust allocates income to beneficiaries. If the trust is claiming expenses at line 41 of the return, apply the expenses to specific types of income before allocating income to the beneficiaries. The trust gets a deduction on the T3 jacket for income that is allocated to the beneficiaries.

Some of the trust income may be taxed in the trust. Specify for each type of income the amount that the trust will retain. ProFile displays the remaining income as the amount to be allocated to the beneficiaries.

On the Allocation form, Preparers may also need to enter certain T3 slip amounts, such as a retiring allowance, death benefit, or foreign business income.

Data Entry and Flow for T3 in ProFile

The T3 Info form contains sections for general information, trust type, and other basic details of the trust.

Preparers will report income, deductions, and general information about the trust. This information will be kept in the beneficiary worksheet. On the Beneficiary worksheet, enter details such as the beneficiary's name, address, and what kind of beneficiary (Individual vs. Corporation/Organization).

There are numerous data entry forms, including business and rental statements, dispositions on Schedule 1, and T3 and/or T5 income received by the trust.

If the trust is giving money to its people, the forms in the Beneficiaries tab of the Form Explorer are important.

Any income not allocated to beneficiaries is taxed on Schedule 11, which transfer to page 4 of the T3 jacket.

About the Beneficiary worksheet

On the **Beneficiary** worksheet, enter details such as name, address and residency of the beneficiary. The slip amounts at the bottom of this form are calculated using amounts from the Allocation worksheet multiplied by the percentage applicable to the particular beneficiary (percentage is on the Beneficiary worksheet).

Locating the Beneficiary worksheet

On forms like **Beneficiary**, where there are an unlimited number of slips, browsing is simplified with the following shortcuts:

- Use the horizontal scroll bar to Browse.
- **<Ctrl + Enter>** takes you to the top of the next slip
- **<Shift + Ctrl + Enter>** takes you to the previous slip
- **<Ctrl + Right Arrow>** and **<Ctrl + Left Arrow>** take you to the next or previous column (and scroll to the next or previous slip accordingly)

Beneficiary		Beneficiary details	
Beneficiary #1			
Individual beneficiary		Beneficiary address	
Last name		Address	
First name	Initial	City	
SIN		Province	Country CAN Postal code
Corporation, organization, association, or institution beneficiary		Residency status 0	
Name		Type of slip	Re-Amended?
BN	RC	Type of beneficiary	Preferred beneficiary No
T		Print blank slip?	
		NR4 Payer #	
		NR4 Residency for tax	
		NR4 % rate of tax	0.00
Second beneficiary (if joint account)		Second Corporation, organization, association, or institution beneficiary (if joint account)	
Last name		Name	
First name	Initial	Identification Number	
SIN			
% of income allocated to this beneficiary 0			
	Box	T3 slip	NR4 slip
Capital gains	21	0.00	0.00
Capital gains from dispositions before June 25, 2024 (included in box 21)	52	0.00	0.00
Capital gains from dispositions after June 24, 2024 (included in box 21)	53	0.00	0.00
Non-business income for foreign tax credit		0.00	0.00
Lump-sum pension benefits	22	0.00	0.00
Actual amount of dividends (other than eligible)	23	0.00	0.00

Using the Beneficiary worksheet

The information on the **Beneficiary** worksheet transfers to the **T3** and **NR4** slips. These slips are for reporting and preview purposes only: Data can't be edited on these forms.

The data from the **T3** and **NR4** slips is posted to the **T3 Summary** and **NR4 Summary**.

Schedule 9 is a summary of the amounts allocated/designated to the beneficiaries. ProFile completes this form using the amounts from the "Beneficiary" worksheet. The trust gets a deduction for the total income allocated to beneficiaries at line 928 of this schedule.

Check the T3 jacket and add data to any fields that ProFile T3 doesn't calculate (especially the questions on the first two pages).

About the Allocation worksheet

The **Allocation** worksheet is used to complete the slip amounts for beneficiaries.

Use this worksheet to:

- Choose how you want the money to be split between the people you want to help. The default is that each person gets the same amount of money. If not the case, choose **Other** and enter the percentage applicable to each beneficiary on the **Beneficiary details** worksheet. If Other is selected, the percentage field on each slip of the Beneficiary worksheet becomes an input field. Otherwise, it's calculated based on an equal allocation to all beneficiaries.
- If the trust has claimed expenses at line 41 of the return, the expenses must be applied to specific types of income before the income can be allocated to a beneficiary. These expenses must be applied manually: An audit message will appear if these expenses haven't been entered.
- To retain some of the income to be taxed in the trust. You can specify which type of income and how much is to be retained by the trust.
- To specify amounts for certain boxes of the T3 slips ProFile T3 doesn't automatically complete that, and the information must be entered manually. For example, details related to foreign income and tax paid. Also, if the trust is allocating a retiring allowance or death benefits, those amounts must be specified here.

Using EFILE Slips for T3 in ProFile

About T3 slip EFILE

A T3 Trust return must still undergo paper filing. However, the Slips Summary can undergo EFILE with the related slips.

Note: always print or retain a PDF copy of the CRA confirmation of an EFILE when completed. ProFile doesn't retain a report or record of which slips are transmitted.

Transmitting slips:

1. Prepare the T3 slip in ProFile.
2. Open the **Beneficiary details** form and select the **Type of slip** being transmitted.
3. Select the **Transmit Slips** option under the **EFILE** dropdown menu.
4. Select the appropriate option under the **Data type** dropdown menu, and then select **OK**.

ProFile builds the XML file and automatically launches the CRA transmission window.

5. Review the CRA disclaimer, sign in with your CRA credentials, and submit the XML file.
6. The file submits. Select the **Print** icon on the browser window to print the confirmation number.
7. Select **Close**.

Note: Ensure you have a Business Consent filed with the CRA prior to attempting the EFILE of T3 slips or returns.

The image shows two overlapping windows from the ProFile software. The top window is titled 'Beneficiary details' and contains a form for entering beneficiary information. The 'Type of slip' dropdown menu is highlighted with a red box, showing options: 'O: Original', 'A: Amended', and 'C: Cancelled'. The 'Re-Amended?' checkbox is also visible. Below this, there are fields for 'NR4 Payer #', 'NR4 Residency for tax', and 'NR4 % rate of tax'. The bottom window is titled 'T3 EFILE Session' and contains a 'Choose Slip Filing Type' dialog box. It has two radio buttons: 'T3 Slip' (selected) and 'NR4 Slip'. Below these is a 'Data Type' dropdown menu with options: 'Original', 'Amended', and 'Cancelled'. A 'Cancel' button is located at the bottom right of the dialog box.

EFILE a T3 Return in ProFile

Beginning with the release of 2021.3.0, returns with a year end of 2021 or later will be able to be electronically filed using CRA EFILE credentials. Returns are still required to not have any exclusions on the **T3Efile** worksheet.

A newer section on the **Info** page under **Filing** will default to **Yes** if a T3 is eligible for EFILE and **No** if not.

Slips and summaries must still be transmitted via XML filing.

1. To EFILE the return, select **EFILE** in the menu bar and then **Transmit T3 return**.

The interface displays.

2. Select the type of T3 you are filing and select **Next**.

If your T3 file has EFILE errors, you'll see a rejection box outlining what needs to be corrected.

Returns are submitted to CRA in JSON format. The JSON along with the acceptance or rejection message will be stored in the folder selected in the **T3 EFILE -> Options** directory.

The confirmation number displays on the **Info** page if successfully transmitted.

XML File a T3 Return in ProFile

Preparers using ProFile release 2017.2.5 and later can transmit eligible Trust Returns using the Canada Revenue Service's (CRA) Internet file transfer service. Although EFILE is available to file T3 returns, some preparers may prefer to submit these returns via XML filing.

How does the XML filing for a T3 return work?

Transmitting an XML file electronically to the CRA is different from the EFILE process.

An XML generates based on the information provided on the T3 return. This XML file transmits to the CRA via ProFile.

The CRA issues a confirmation number following submission to confirm the receipt of the XML file.

The Preparer inserts the CRA confirmation number on the T3 return.

What are the requirements for the XML filing of a T3 return?

The CRA [maintains a detailed list of restrictions](#) for filing a T3 return electronically.

Review the list prior to undertaking an XML filing.

What tax years are eligible for the XML filing of a T3 return?

XML filing for T3 returns occurs for 2017-2020. A T3 return undergoing XML filing can't have a year-end date prior to January 1, 2017. Returns later than 2020 can be EFILED.

Preparing a T3 return for XML filing:

1. Open ProFile.
2. Prepare the T3 return.
3. Resolve any error messages displayed under the **MagMedia** tab of the Active Auditor.

If the information on the return is complete, valid, and eligible for the Internet file transfer service, the **Internet file this return?** Question in the return's **Filing** section of the **Info** form checks automatically.

 **Note:** If the return isn't valid, the question remains unchecked and prevents the XML file from transmitting. See section **Using the T3 EFILE** below for resolution.

XML filing a T3 return:

1. Open the populated T3 return.
2. Select the **Transmit T3 Return option** from the **EFILE** dropdown menu. The **Transmit T3 Return** window displays.
3. Select a **return type** (for example, **T3 Return**).
4. Select **OK**. The XML file builds.

If successful, a message indicating the processing and completion of the XML build displays.

5. Select **OK**.

ProFile automatically opens the CRA transmission window.

6. Enter the Preparer account number and Web access code when prompted.
7. Select **Next**. The **Internet file transfer - attach your return** window displays.

 **Note:** The XML file path already populates in the directory field. To search for a different XML file, select **Browse**.

8. Select **Submit**. The XML file transmits to the CRA.

The CRA provides a confirmation number following transmission.

9. Manually enter the confirmation number in the **Confirmation Number** field of the T3 return's **Filing** section.
10. Save the return.

Review our [support article](#) for additional details.

Early Filing Next Year for T3 in ProFile

The next year's T3 module in ProFile isn't available until the year after. For example, when the 2024 T3 module is the last one released and you need to prepare a T3 return with 2025 year-end, the 2025T3 module isn't available until January of 2025. In this situation, the previous year's T3 module is used for preparing next year's T3 return.

New tax rate implementation

New tax rates are implemented in the previous year's T3 module to handle preparation of next year's T3 returns. Entering the appropriate year-end on the **Info** page initiates the applicable tax rates for that year. T3 returns filed using the previous year's tax forms are acceptable to CRA, and they will reassess the return if required.

Preparing next year's T3 return using the previous year's T3 module:

1. Save a duplicate copy of the previous year's T3 return to be used as the next year's T3 return.
2. Open the copy of the previous year-end T3 return in ProFile.
3. Enter the appropriate year-end for the trust return T3 to be prepared. This begins the applicable tax rates for next year.
4. Delete the information pertaining to the previous year-end, keeping what's required for the next year-end.
5. Enter the T3 data required for filing the next year's trust return, allocate income to beneficiaries, and create the T3 slips.
6. Print the T3 trust return using **File -> Print** and print T3 slips using **File -> Print Slips**.
7. Save the T3 trust return with a different file name to identify the tax rates for that year.

Managing Form Expert (FX) Module in ProFile

Overview of Form Expert (FX) Module in ProFile

FX and FX/Q includes a comprehensive set of tax forms that are fully interactive, automatically performing all calculations.

The forms include:

- T4, T5, T5018, T5008, T5013, RL1, RL3, RL15, and more
- Partnership Information Return and Schedules (T5013 Schedules and TP600 for Québec)
- Charity and Non-Profit Organization forms (T3010 and TP-985.22 for Québec)
- Additional GST/HST/QST, TD1, RCA, Nonresident and Recourse forms
- Federal, Québec and provincial rollover forms (T2057, T2058, T2059, TP529, TP614, AT107, AT108 and AT109)
- BC Logging Tax Return of Income (FIN542 and FIN146)
- Other forms (for example, RC199, CPT30, T3D, T3RI, etc.)

Verifying Client Data for Form Expert (FX) in ProFile

Verifying Client Data before filing slips in FX module

Before transmitting a slip or return information with EFILE, ensure that the file is complete and accurate. ProFile includes audit and review tools that can help.

FX Module:

1. Ensure the question **Are you internet filing slips?** on the **Info** form is set to **Yes**.
2. Ensure any messages in the **Active Auditor**, especially those in the **Mag Media** tab, are resolved. Double-click the message in the **Auditor** to identify the area that needs reviewing.
3. When undertaking the initial EFILE of a slip, Preparers enter the Business Number in the EFILE wizard. If transmitter information must be changed in the future, select **EFILE -> Options -> Transmitter** under the **T3/FX** section. Information can be updated as required.

The screenshot shows the 'Info' tab of the ProFile interface. Under the 'Taxation Year' section, the 'Tax Year' is set to 2023, and the 'Fiscal Period' is from 2023/12/01 to 2024/11/30. A red box highlights the question 'Are you internet filing slips?' with 'Yes' selected via a radio button. A 'File ID' field is also visible. Below this, the 'Transfer data to applicable forms?' option is selected with a radio button.

When ProFile makes an XML file that can be sent, it shows slips and information that is not correct. If the information isn't correct, ProFile can't make the XML file. View a summary of the problems affecting a file by selecting the (+) symbol next to a failed file. Hover over the message to read the full text.

A common cause of wrong XML files is when you override fields that are part of the information you want to send. For example, you might override a field instead of using amounts that ProFile calculates or takes from another form. Avoid using the override feature whenever possible.

Note: ProFile can't identify the location of any error. It's necessary to locate the error yourself as a customer.

For more information on entering filing credentials for FX, please review our [support article](#).

EFILE Slips for FX Module in ProFile

Note: ProFile doesn't retain a report or record of which slips are transmitted. Always print or retain a PDF copy of the CRA confirmation of an EFILE when completed.

Setting up transmission credentials

Before you start, make sure your filing credentials are entered. A transmitter number is no longer needed, but you'll need a Rep ID, trust number, business number, or nonresident account number. See our [article on entering filing credentials for FX or T3](#).

Filing slips

Select the type of filing you are undertaking:

Note: Only current-year slip filing is supported in ProFile at this time.

EFILE original slips

1. Open the FX return in ProFile.
2. Make sure there are no outstanding errors under the Mag Media auditor tab.
3. Browse to the **Information (Info)** form of the return.
4. Select **Yes** to the question: Are you internet filing slips?

Note: The option to Internet file slips won't appear unless this option is set to Yes.

4. Select the **Properties** option from the **File** dropdown menu.
5. Review the Slips Status section under the **EFiling** column. Set the slip status of the slip type you are filing to **Ready to file**.
6. Select the **Transmit slips** or a **T5013 return** option from the **EFILE** dropdown menu.
7. Select the slip that is set with the Ready to File value.

Select slip to file

Click on one of the following slips for selecting it to be transmitted. Once selected, the "Next" button will appear. Please note that only the slips that have the status as "Work in process" or "Ready to file" may be transmitted.

Slip	Status	Type	MM Error
T4	Ready to file	Original	No
T4A	Unknown	Original	No
T4ANR	Empty	Original	No
T5	Empty	Original	No
T5018	Empty	Original	No
NR4	Empty	Original	No
T5008	Empty	Original	No
T5013	Empty	Original	No
T5013FIN	Empty	Original	No
T2202	Empty	Original	No

Cancel

8. Select **Next**. If you don't see Next, check again if there are MM errors in the auditor. The XML file builds after selecting Next.
9. Read the disclaimer and select **I agree** at the end to give consent for the XML transmission.
10. Enter the Account number and Web access code at the CRA portal page. Select Sign in. The XML file transmits to the CRA.

Note: Due to changes in CRA requirements, the account number must be manually entered. It must match the number used to build the XML file in the **Electronic Filing Options** window.

11. We recommend printing the confirmation after you receive it.

Batch EFILE Slips for FX module in ProFile

This process requires an FX Web Access Code (WAC) from the CRA. This isn't the same code used for T2 corporate returns.

[Select here to learn more](#) about requesting a WAC from the CRA.

Note: To obtain a Web Access Code (WAC) you'll need your business's latest Notice of Assessment (NOA) or Reassessment (NOR). This is the same process as receiving a T2 WAC but a separate WAC code is obtained for filing in each module. If you're filing for the first time, contact the [CRA help desk](#) for a WAC, as it's not available through ProFile.

Also, you can only file slips from FX online from the Client Explorer database. You can't file slips from Classic Database.

Note: ProFile supports filing slips created in the FX module for 2023 and onward.

Multiple FX slips can undergo a batch transmission using the Client Explorer database.

Starting the Client Explorer database:

1. Select **Database...** from the **Options** dropdown menu. The **Database/Client Explorer Options** window displays.
2. Select the **Use Client Explorer** option.
3. Select **OK**.
4. Select the **Client Explorer** option under the **GoTo** dropdown menu.

The **Client Explorer** displays.

Filtering and selecting returns:

1. Select **Filter**. The filter window displays.
2. Select the checkbox on the **FX** tab and clear the other module tabs by unchecking them.
3. Select the checkbox for the tax year you want (for example, 2024) on the FX tab. Clear the checkboxes for all other years by unchecking them.
4. Select the appropriate checkboxes in the remaining sections of the **FX** tab to filter for slip details. Clear the other options by unchecking them.
5. Select **Apply Filters**. A list of slips that meet the set slip criteria displays.
6. Select the slips to EFILE.

Building the EFILE Link:

1. Select the **Build EFILE...** link in the top-left **Actions** menu.

The **Build the XML file** window displays.

2. Select the slips to undergo EFILE (for example, **T4**).
3. Select **OK**.

The XML file builds and the **CRA Internet File Transfer** window opens.

Transmitting the XML file to CRA:

1. Log onto the CRA slip transmission [website](#) (you must agree to the terms before you're able to get to the login screen).

Note: Transmission of the XML file requires an FX Web Access Code (WAC). If this is the first time internet filing slips, a WAC request must be made to the CRA. Ensure that you print a confirmation copy provided by the CRA for your submission records.

2. Complete the XML transmission process.

EFILE Amended Slips for Form Expert (FX) in ProFile

Preparers can electronically file an amended slip through the FX module.

Note: ProFile doesn't retain a report or record of which slips transmit. Always print or retain a PDF copy of the CRA confirmation of an EFILE when completed.

Transmitting an amended slip:

1. Open the applicable return in ProFile (for example, a T4).
2. Under the **Slip type?** section, set the type to **AMENDED**.
3. Make all the necessary changes to the slip.
4. Select **File**, and then **Properties....**
5. Set the **Slip Status** for **Magmedia** to **Ready to File**.
6. Select the **Internet File Slips** option under the ProFile **EFILE** dropdown menu.
7. Check the box of the slip to be transmitted (for example, **T4**).
8. Change the data type to **Amended** in the **Data Type** dropdown menu.
9. Select **OK**. The amended slip transmits.

ProFile builds the XML file and automatically launches the CRA transmission window.

10. Review the CRA disclaimer, log in, and submit the XML file.
11. The file submits. Select **Print** to print the confirmation number.
12. Select **Close**.

EFILE a Canceled Slip for Form Expert (FX) in ProFile

Preparers can electronically file a canceled slip through the FX module.

 **Note:** ProFile doesn't retain a report or record of which slips are transmitted. Always print or retain a PDF copy of the CRA confirmation of an EFILE when completed.

Transmitting a canceled slip:

1. Open the applicable return in ProFile (for example, a T4).
2. Under the **Slip type?** section, set the type to **CANCELED**. When transmitting, the slips automatically revert to a value of **0**.
3. Select the **Properties...** option under the ProFile **File** dropdown menu.
4. Set the **Slip Status** from **Magmedia** to **Ready to File**.
5. Select the **Internet File Slips** option under the ProFile **EFILE** dropdown menu.
6. Check the box of the slip to transmit (for example, **T4**).
7. Change the data type to **Cancelled** in the **Data Type** dropdown menu.
8. Select **OK**. The amended slip transmits.

ProFile builds the XML file and automatically launches the CRA transmission window.

9. Review the CRA disclaimer, login, and submit the XML file.
10. The file submits. Select the **Print** icon on the browser window to print the confirmation number.
11. Select **Close**.

Transmitting RL Slips for Form Expert (FX) in ProFile

Included in the 2018.2.0 and later ProFile release is a revised method for transmitting RL Slips for the FX module to Revenu Québec.

The new process eliminates the need to attach an XML file to the RL slip transmission and instead transmits the information directly to Revenu Québec.

Setting credentials prior to transmission:

1. Select **Options...** under the **EFILE** menu .

The **Electronic Filing Options** window displays.

2. Select the **MRQ Slip Numbers** option under **T3/FX** on the left-side menu.
3. Enter the Magnetic Media slip numbers.
4. Select the **Transmitter** option under **T3/FX** on the left-side menu.
5. Enter the **Québec Transmitter Number**.
6. Select the **Contact information** option under **T3/FX** on the left-side menu.

The **Contacts** window displays.

7. Enter all requested contact information in the **Accounting** section. This is essential to avoid transmission errors. Requested contact information in the **Technical** section is optional to provide.
8. Select **OK**. The contact information is saved.
9. Select the **Environment...** option from the **Options** dropdown menu.

The **Environment Options** window displays.

10. Browse to the **Preparer** tab.
11. Populate the fields under the **Preparer** section. This is essential to avoid transmission errors.
12. Enter the **Identification Number** in the tab.

The screenshot shows the 'Electronic Filing Options' window with the 'T3/FX' tab selected. The left sidebar has 'MRQ Slip Numbers' highlighted. The main area is titled 'Magnetic Media Numbers assigned by MRQ' and contains a table with columns: Year (2024), Starting, Ending, Next available, and a Reset button. The table lists RL1 through RL16. RL1 and RL2 have values in the Starting and Ending columns. RL3 through RL16 have empty fields. At the bottom are buttons for 'T1/TPI Wizard', 'OK', 'Cancel', and 'Help'.

The screenshot shows the 'Electronic Filing Options' window with the 'Transmitter' tab selected. The left sidebar has 'Transmitter' highlighted. The main area is titled 'Transmitter Identification' and contains fields for Name, Country (Canada), Language of Communication (English/French), Rep ID, and Transmitter Number. There are also radio buttons for Business number, Trust number, and Non-resident account number, and a Web Access Code field. At the bottom are buttons for 'T1/TPI Wizard', 'OK', 'Cancel', and 'Help'.

The screenshot shows the 'Environment Options' window with the 'Preparer' tab selected. The left sidebar has 'Preparer' highlighted. The main area contains fields for Name, Firm, Street, PO Box, RR, City, Province (Ontario), Postal Code, Phone, Fax, Email, and RepID. Below these are fields for Initials, Preparer (TF), Partner (TF), Quebec enterprise number (NEQ), Identification Number, Professional Representative Number, and a section for Authorize/cancel representative and business consent with RepID, Business Number, and Group ID fields. At the bottom are buttons for 'Office Info Setup wizard', 'OK', 'Cancel', and 'Help'.

13. Select **OK**.

✓ Your settings have been saved.

Transmitting slips:

Note: The new RL slip transmission process means that an XML file is no longer generated and stored on the user's computer. The information is transmitted directly to Revenu Québec.

1. Open the return.
2. Select the **Transmit RL slips** option under the **EFILE** dropdown menu.

The **Transmit RL slips** window displays.

3. Select the slip(s) to transmit.
4. Set the slip type in the **Type** column.
5. Select **Next**.

The **Ready to transmit** window summarizes the slip details.

6. Ensure all slip details are correct before transmitting.
7. Select **Transmit**. The slip transmits.

A confirmation displays when the transmission completes successfully.

Note: Please be aware that there's no retention of slip submissions or results by ProFile.

Slip	Status	Type	MM Error
RL1	Ready To File	Original	No
RL2	Work In Process	Original	No
RL3	Work In Process	Original	No
RL8	Work In Process	Original	Yes
RL15	Work In Process	Original	Yes
RL24	Work In Process	Original	Yes
RL25	Work In Process	Original	Yes
RL30	Work In Process	Original	Yes

Read our [support article](#) for more information, including looking at and printing a transmission confirmation number.

Learning More About ProFile

ProFile Community and Support Site

The ProFile Community and Support Site is available to serve our valuable customers more effectively. You can now search both our [support articles](#) and forum questions at the same time, to return the best possible answer to your product question.

Available 24 hours a day, our [Community and Support Site](#) has more than 1,200 articles designed to improve your ProFile experience.

Sending Feedback About ProFile

ProFile users can easily provide feedback on ProFile's functionality or suggest an enhancement to the product.

The product owner, developer, or analyst reviews all feedback.

Opening the feedback window in ProFile:

1. Select the **Send Feedback** option under the **Help** dropdown menu or select **Suggestion**.

The **ProFile Feedback** window displays.

2. Describe your idea in the feedback field. You can be as specific as you like.
3. Enter your email so ProFile can contact you in case more details are required.
4. Select **Submit** when finished.

✓ The **Additional details** window will display.

The screenshot shows a window titled "ProFile Feedback" with a close button (X) in the top right corner. Below the title bar, a message reads "Your feedback will help us make ProFile better." The main content area contains a text input field with the placeholder text "What works well in ProFile? What needs improvement?". At the bottom right of the window, there are two buttons: "Submit" and "Cancel".

Additional ProFile Resources

Assisted Onboarding

This is a resource for new users, included with the cost of your subscription. This 45-minute call with a product expert, will ensure that you have set up ProFile properly so you can get started with your returns. If you'd like to book an Assisted Onboarding session, select a date and time that's convenient to you [here](#). During your session, just let the agent know what you need help with!

Training and Tutorials Site

Whether you are a new ProFile user or an experienced expert, you can improve your skills with [our training resources, video tutorials, and Tips and Tricks site](#). Updated regularly, this site includes both core and advanced information to help you throughout the return preparation process.

Webinars Calendar

Keep learning with our informative webinars, held every Tuesday and Thursday throughout the year. Live webinars take you through the finer points of ProFile, and if you have any questions, our experts are there online with you, ready to answer.

You can join an [upcoming webinar through the calendar](#).

In-Product Help

The in-product Help utility provides an easy way to learn about forms, slips, schedules, ProFile's functions, and many other topics. Simply press the <F1> key from anywhere in ProFile to launch the Help utility.

Live Chat

Inside the ProFile software (and on many of our support pages) you will find the Live Chat option. This quick tool lets you talk to one of our support representatives online right away, without waiting on the phone or interrupting your work. Available during our regular support hours.

YouTube Channel & Playlists

You will find several videos regarding ProFile on the [Intuit Accountant Canada](#) YouTube Channel. Several playlists can be found such as our Training Tour recordings, How to Videos, Tania Talks & Sifa Parle (French). Remember to sign up for notifications, to ensure you're up to date on any new content in a playlist!
